Bimetal Indicators

Measurement of the average effective value through bimetal mechanism (with non-return pointer)

Indication of currently measured value through moving iron mechanism

- With same or opposing rotation axis

Inputs

- 1 A or 5 A

Response times

- 8 or 15 minutes

Formats

- 72 mm x 72 mm
- 96 mm x 96 mm
- 144 mm x 144 mm

Bimetal Indicators 10/30-1.64 EN

General data

Standards

The indicators comply with DIN EN 60051 and with the safety regulations according to DIN EN 61010-1.

In the sections below you can find a short description of the most important parts of these regulations regarding the construction and the characteristics of electrical measuring instruments.

Measured error

The measured error of an indicator or its accessories is given by the limits through basic errors and effects.

Bimetal indicators comply with Class 3, the moving iron mechanism with Class 1.5.

Mounting orientation

Generally, the nominal position is indicated by a position symbol. For indicators without such a position identification, the reference range is any vertical or horizontal position. The nominal mounting orientation is 5° in every direction of the reference position. Note that the effect (in addition to the indicated error) must not be greater than 50 % of the respective classified error.

Temperature effect

If not otherwise stated, the reference temperature is 23 °C \pm 2 K for indicators of Class 0.5 to 5. The additional error for a nominal range of \pm 10 K within this temperature range must not exceed the classified error.

Moving iron mechanism with opposing rotation axis

Moving iron mechanism with same rotation axis

General technical specifications

Scale and pointer design

The scales and pointers for square, circular, vertical or horizontal scales comply with DIN 43802, Parts 2 and 4.

Environmental conditions to DIN EN 60721-2-1, 2, 5

	Permissible variables			
Conditions	Normal measuring instruments → H, Y, G	Relatively tropicalized instruments → H, V, F		
Operating temperature	-25+40 °C	-25+55 °C		
Relative humidity	max. 85 %, but not more than 60 days per year, otherwise 75 %, annual average 65 % (max. temperature +27 °C)	max. 95 %, but not more than 30 days per year, otherwise 85 %, annual average 75 % (max. temperature +25 °C)		
Condensation	none	none		

Mechanical category to DIN EN 60068

Vibration = Part 2-6

Normal version

Frequency range 5...55 Hz Acceleration max. 2.5 g

No. of cycles 5

Runtime 1 octave per minute

Shock = Part 2-27

Normal version

Acceleration max. 15 g Time of action 11 ms

Type of protection

If not otherwise specified, the indicators comply with DIN EN 60529

IP 52 for case¹⁾

IP 00 for terminals

¹⁾ Exception: FBia = IP 40 (see device specifications)

Bimetal Indicators 10/30-1.64 EN

With bimetal mechanism With moving iron/bimetal mechanism

Application

Bimetal ammeters are thermally inert and indicate the average effective value. Intermittent current peaks have no influence on the measuring results, but continuous interferences are indicated. Due to the big torque of the measuring mechanism, the pointer can move a non-return pointer.

As a result, a reached maximum value remains constantly readable until a manual reset takes place.

Mechanical construction

	Front dimensions	Rated dimensions				Cutout dimensions	Mounting depth	Connections
	(mm)	a	h	b	С	е		
Bimetal with non-return pointer	72 x 72	72 x 72	5	68 ^{+0,7} x 68 ^{+0,7}	53	M4		
	96 x 96	96 x 96	5	92 ^{+0,8} x 92 ^{+0,8}	60	M4		
Bimetal with moving iron	72 x 72	72 x 72	5	68 ^{+0,7} x 68 ^{+0,7}	53	M4		
	96 x 96	96 x 96	5	92 ^{+0,8} x 92 ^{+0,8}	60	M4		
	144 x 144	144 x 144	8	138 ⁺¹ x 138 ⁺¹	98	M5		

Dimensional drawings

Technical data

Normal version

black, RAL 9005, matt

Frequency range

50...100 Hz

Mounting orientation

vertical, if not otherwise specified; 2c in the illustration on page 2

Thermal delay of bimetal mechanism

15 min.; optionally 8 min.
