

F654

Wall-mounting cabinets for distribution

Course Duration

The duration is one day. This course can be extended to two days by combining it with the CombiLine-M course (NSP 8)

Course Type

This is a classroom course led by a trainer with a maximum of 7 participants.

Course Goal

- You are familiar with the STRIEBEL & JOHN Main Catalogue
- You have gained fundamental product knowledge
- You are familiar with and able to use the software tool PDC

Student Profile

The course is intended for installers (electricians) and panel builders, electrical wholesale employees, and interested professionals.

Prerequisites and Recommendations

The student must have basic electro technical knowledge.

Main Topics

You acquire fundamental product knowledge of the STRIEBEL & JOHN wall-mounting cabinet ranges. You get to know the installation and mounting advantages and become familiarized with the CombiLine-M system technology.

- Wall-mounting cabinets for flush mounting distribution applications
- Wall-mounting cabinets for surface mounting distribution applications
- Integration of the modular distribution panel system CombiLine-M
- Expansion with distribution panels and combination sets
- Overview of the accessories
- Practical training in the seminar workshop
- Presentation of the PDC panel design configuration software
- Tour of the production facilities
