

SAFETY PRODUCTS

# Eden OSSD Coded non-contact safety sensor Product Manual

# Read and understand this document

Please read and understand this document before using the products. Please consult ABB with any questions or comments.

### Suitability for use

ABB shall not be responsible for conformity with any standards, codes, or regulations that apply to the combination of products in the customer's application or use of the product. Third party certificates for the products are available at https://new.abb.com/low-voltage/products/safety-products. This information by itself is not sufficient for a complete determination of the suitability of the products in combination with the end product, machine, system, or other application or use.

The following are some examples of applications for which particular attention must be given. This is not intended to be an exhaustive list of all possible uses of the products, nor is it intended to imply that the uses listed may be suitable for the products:

- Outdoor use, uses involving potential chemical contamination or electrical interference, or conditions or uses not described in this document.
- Nuclear energy control systems, combustion systems, railroad systems, aviation systems, medical equipment, amusement machines, vehicles, and installations subject to separate industry or government regulations.
- Systems, machines, and equipment that could present a risk to life or property.

Please know and observe all prohibitions of use applicable to the products.

NEVER USE THE PRODUCTS FOR AN APPLICATION INVOLVING SERIOUS RISK TO LIFE OR PROPERTY WITHOUT ENSURING THAT THE SYSTEM AS A WHOLE HAS BEEN DESIGNED TO ADDRESS THE RISKS, AND THAT THE ABB PRODUCT IS PROPERLY RATED AND INSTALLED FOR THE INTENDED USE WITHIN THE OVERALL EQUIPMENT OR SYSTEM.

Descriptions and examples show how the product works and can be used. It does not mean that it fulfills the requirements for all types of machines and processes. The buyer/user is responsible for installing and using the product according to applicable standards and regulations. We reserve the right to make changes to the product and the documentation without prior notice.

# 1 Introduction

# Scope

The purpose of these instructions is to describe the non-contact coded digital safety sensor Eden OSSD and to provide the necessary information required for installation and operation.

# Audience

This document is intended for authorized personnel.

### Prerequisites

It is assumed that the reader of this document has knowledge of the following:

- Basic knowledge of ABB safety products.
- Knowledge of machine safety.

### Special notes

Pay attention to special notes in the document:

- Warning! Risk of severe personal injury! An instruction or procedure which, if not carried out correctly, may result in injury to the technician or other personnel.
- (!) Caution! Risk of damage to the equipment! An instruction or procedure which, if not carried out correctly, may damage the equipment.
- **Note!** Important or explanatory information.

# 2 Safety

## Safety precautions

The safety precautions must be followed during installation, operation, maintenance and troubleshooting.

It is the responsibility of the user to ensure the correct overall functionality of its systems and machines.

**Warning!** Carefully read through the <u>entire</u> product manual before using the device.

Warning! The devices shall be installed by authorized personnel following the Safety regulations, standards and the Machinery directive.

Warning! For installation and prescribed use of the product, the special notes in the instructions must be carefully observed and the technical standards relevant to the application must be considered.

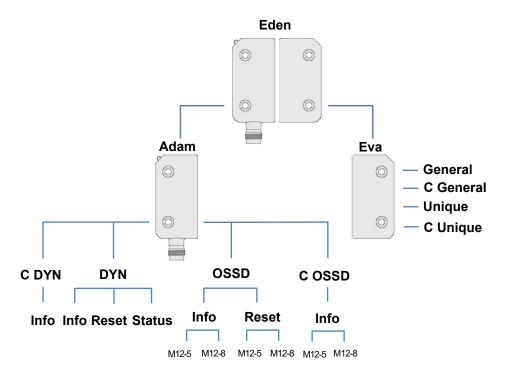

Warning! In case of failure to comply with the instructions or standards, especially when tampering with and/or modifying the product, any liability is excluded.

# **3 Product description**

Eden OSSD sensor consists of two separate devices, Adam and Eva, intended for use as interlocking device for gates, hatches etc. Eva can be general coded or unique coded.

Eden OSSD meets the coding requirements according to EN ISO 14119:2013 regarding manipulation protection.

Eden digital, relationship

### Models of Adam and Eva

Eden communicates with OSSD signals and can be connected to any safety module that handles OSSD-signals. Up to 30 Eden sensors can be connected in series without reducing the achieved performance level. Adam and Eva are acquired separately, and it is possible to mix different models of Adam OSSD in the same safety circuit.

## Adam OSSD

Adam OSSD exists in different models:

#### Adam OSSD-Info M12-8

OSSD model with information output, and inputs for cascade connection.

#### Adam C OSSD-Info M12-8

OSSD model with information output, inputs for cascade connections, and coated electronics to provide increased resistance in demanding environments.

#### Adam OSSD-Reset M12-8

OSSD model with built in monitored reset, indication lamp output, and inputs for cascade connection.

Adam OSSD-Info M12-5 OSSD model with information output.

#### Adam C OSSD-Info M12-5

OSSD model with information output and coated electronics to provide increased resistance in demanding environments.

#### Adam OSSD-Reset M12-5

OSSD model with built in monitored reset and indication lamp output.

### Eva

Eva exists in different models. It is possible to mix different models of Eva in the same safety circuit.

#### Eva General code

Eva units with general code all have the same code and fulfills the requirement for a low-level coded interlocking device according to EN ISO 14119:2013.

#### Eva C General code

Eva general code with coated electronics to provide increased resistance in demanding environments.

#### Eva Unique code

Eva units with unique code have different unique codes. The unique models fulfill the requirements for a high-level coded interlocking device according to EN ISO 14119:2013.

#### Eva C Unique code

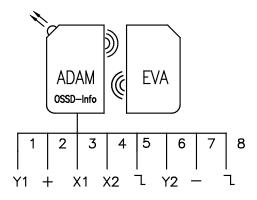

Eva unique code with coated electronics to provide increased resistance in demanding environments.

# **4** Electrical connections

**Note!** Use a suitably insulated low-voltage supply system type SELV or PELV.

**1** Note! Connection examples are applicable also on corresponding Eden C models.

#### Adam OSSD-Info M12-8

M12 8-pole male from cable side

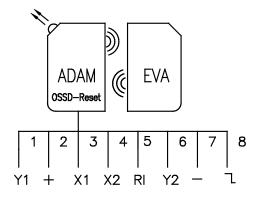

M12 8-pole female from cable side

#### M12-connector: (8-pole male)

1)	White:	OSSD signal 1 Out		
2)	Brown:	+24 VDC		
3)	Green:	OSSD signal 1 In		
4)	Yellow:	OSSD signal 2 In		
5)	Grey:	Information		
6)	Pink:	OSSD signal 2 Out		
7)	Blue:	0 VDC		
8)	Red:	Information		

### Adam OSSD-Reset M12-8

- 8) Red: Information

### Adam OSSD-Info M12-5

M12 5-pole male from cable side

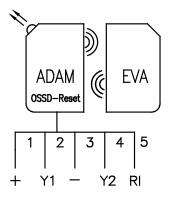

M12 5-pole female from cable side

### M12-connector:

(5-pole male)

- 1) Brown: +24 VDC
- 2) White: OSSD signal 1 Out
- 3) Blue: 0 VDC
- 4 ) Black: OSSD signal 2 Out
- 5) Grey: Information

### Adam OSSD-Reset M12-5

M12 5-pole male from cable side

M12 5-pole female from cable side

#### M12-connector:

(5-pole male)

1)	Brown:	+24 VDC
2)	White:	OSSD signal 1 Out
3)	Blue:	0 VDC
4)	Black:	OSSD signal 2 Out
5)	Grey:	Reset/Indication

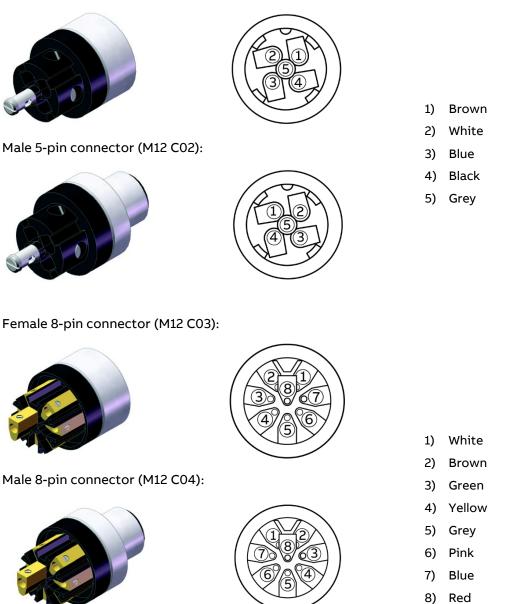

Note!

The use of shielded cable is recommended for enhanced electromagnetic immunity.

**Caution!** All cable colors according to ABB standard cables.

### Connection of cable C5, C8 in M12 C01-C04 connectors

Female 5-pin connector (M12 C01):

### Information output signal attributes

The Information pins on all Adam OSSD models are set high (+24 VDC) when Eva is detected as present, otherwise they are set as low.

The maximum current consumption for the information outputs are 15 mA (8-pin) and 30 mA (5-pin).

**ng!** The information output signal is not a failsafe signal and must <u>never</u> be used for the safety purpose(s).

### **Connection of Reset button to Adam OSSD-Reset**

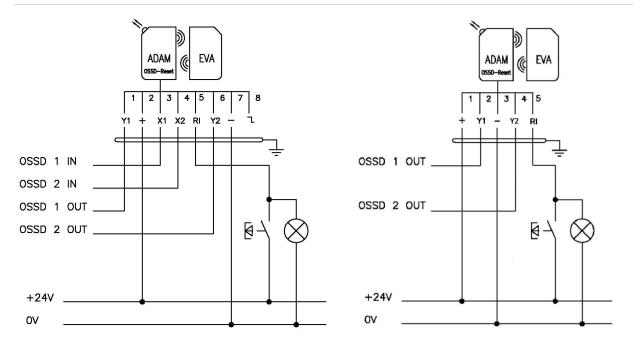

Adam OSSD-Reset is a model prepared for monitored local reset. A reset light button can be connected to pin 5 and Adam OSSD handles the monitored reset and the indication lamp of the Reset button. Each Eden with a local reset can be reset individually and independently of the others. Only when all Eden units in the safety circuit have been reset, the safety circuit itself is reset and the machine can be restarted.

Any button with a NO-contact and an indication lamp can be used. See electrical connection below. The maximum current consumption for the indication lamp is 30 mA. Smile 12RF and Smile 12RG are Reset buttons with indication lamps from ABB indented to be used together with Adam OSSD-Reset. The minimum current consumption needed through the lamp is 10 mA. If no lamp is used, a 4.7 kOhm resistor can be used instead.

The reset signal is accepted as valid only when the reset signal is high for more than 100 ms but less than 3 s.

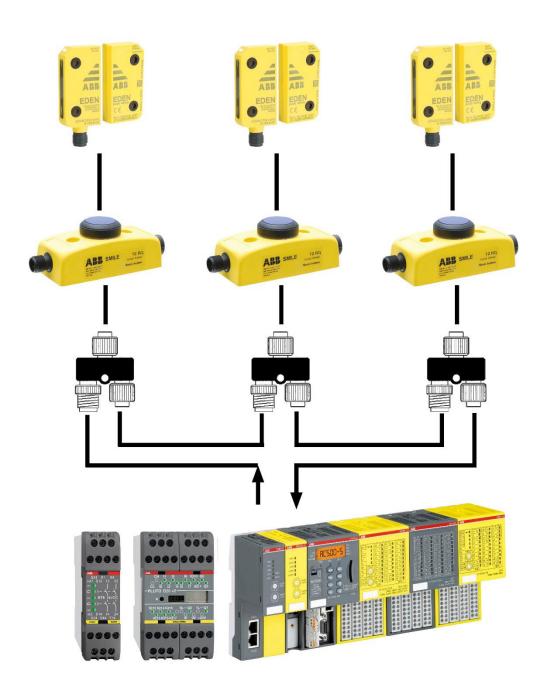

Cable length between Reset button and Adam sensor: max 10 m.

Reset indication lamp status	Description	
On:	No valid Eva is detected, safety circuit is open.	
Flash (0.4 s on / 0.6 s off):	Valid Eva is detected. Waiting for reset.	
Off:	The reset button has been pressed and the safety circuit is closed.	

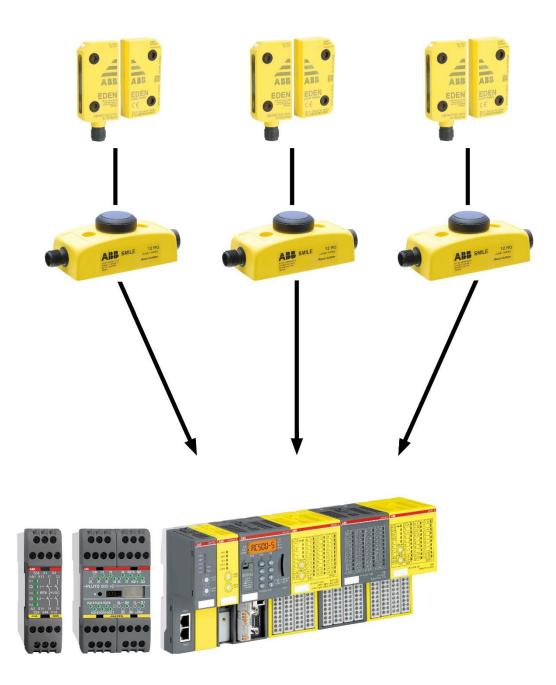

**Note!** OSSD IN can be contacted directly to +24 VDC if no previous OSSD unit exist in the safety chain.

Warning! Several Eden must not be connected in parallel to a common reset button. Each Eden must be separately connected to a local reset.

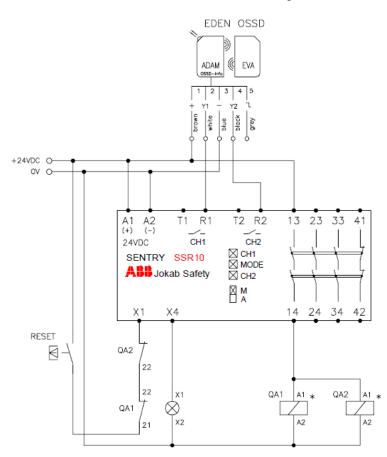

Serial connection of three Adam OSSD-Reset M12-8 through M12-3G with Smile 12RG to a safety relay, Pluto or another safety PLC (i.e. ABB AC500-S).

Individual connection of three Adam OSSD-Reset M12-5 with Smile 12RF to a Pluto or another safety PLC (i.e. ABB AC500-S).

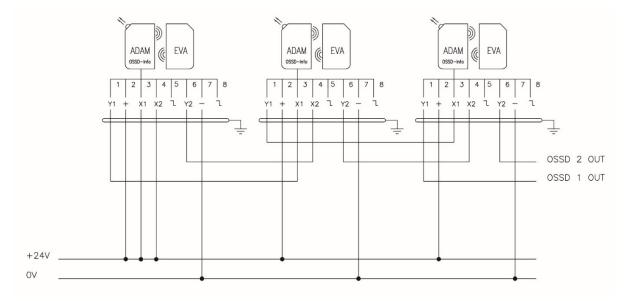

# 5 Connection examples

### Adam OSSD-Info connected to Sentry

\* NOTE! Always use transient suppressors when inductive loads.

# Several Adam OSSD-Info connected in series

A) Three Adam OSSD-M12-8 connected in series.

# 6 Installation

### Installation precautions

**Warning!** All safety functions <u>shall</u> be tested before starting up the system.

- Note that the detection distance can be affected when Eden is mounted close to metal.
- The Eden can be mounted on metal but must not be surrounded.
- The S<sub>ar</sub> distance must be used in calculations (e.g. for minimum safety distance).
- Control that Adam and Eva are aligned in parallel to each other.

### Minimum safety distance

When using interlocking guards without guard locking to safeguard a hazard zone, the minimum allowed safety distance between the guarded opening and the hazardous machine must be calculated. To ensure that the hazardous machine motion will be stopped before it can be reached, the minimum safety distance is calculated according to EN ISO 13855: 2010 ("Positioning of safeguards with respect to the approach speeds of parts of the human body").

The minimum safety distance is calculated according to the formula:

Where

- **S** = minimum safety distance (mm)
- **K** = approach speed of a human body; 1600 mm/s

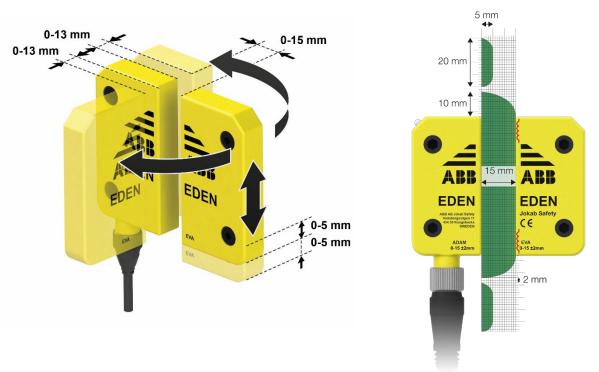

**T** = the total time from opening of the guard until the hazardous machine movement has stopped, i.e. including control system reaction times and other delays (s)

**C** = a safety distance taken from Table 4 or Table 5 of EN ISO 13857:2008, if it is possible to push fingers or a hand through the opening towards the hazard before a stop signal is generated.

Note! In some cases, T might be reduced by the opening time of the guard until the opening size permits access of the relevant parts of the body. Refer to EN ISO 13855:2010 for further details and EN ISO 13857:2008 for specified values.

#### **Detection distance**

Eva can be turned in several different ways relative to Adam, see details in the figure below. The green fields in the picture show the detection range of Adam relative to Eva. The Eva is detected when the two coils (see red-marked areas, image below) in Eva are in contact with the green field.

The figures above shows maximum detection distances.

Detection distance between Adam and Eva:	0-15 mm +/- 2 mm
Recommended distance between Adam and Eva:	7 mm
Minimum distance between two Eden pairs:	100 mm

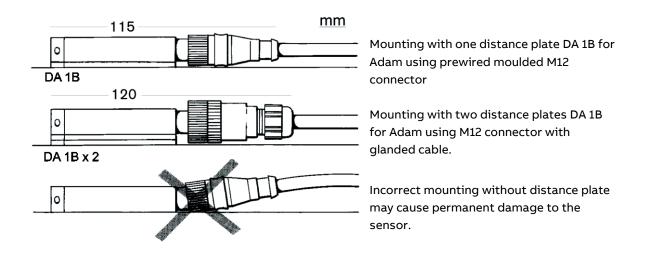

**!** Caution! The detection distance can be affected if Eden is mounted close to metal. Distance plate DA 1B must be used to prevent this.

Distance plate (DA 1B)

### Mounting

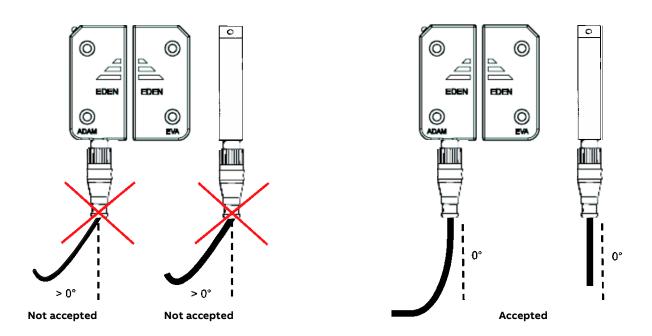

Depending on the cable connector used for the connection to Eden, one or two distance plates might be required for correct mounting to avoid damaging Adam. It is recommended to use the distance plates DA 1B, supplied with the Adam, see figure below. Also, the mounting spacers DA 2B supplied must be used to physically protect Eden from damage.

The cable must be mounted so that no force is applied on Adam in any directions. The cable must be fixed if it is connected to a moving object, for example a cable chain or a door. This can be done, with for example, two cable clamps.

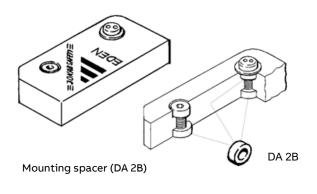

on! An improperly installed cable can damage the sensor.

### Mounting procedure

- 1. Fasten each sensor with two M4-screws. Safety screw SM4x20 (2TLA020053R4200) is recommended. The DA 2B mounting spacers must be used to physically protect Eden from damage.
- 2. Use max tightening torque 1.0 Nm on screws.
- 3. Lock screw with Loctite or similar if necessary, to prevent easy dismounting (refer to risk assessment).
- 4. Tighten the M12-contact with tightening torque 0.6 Nm. A torque wrench is recommended to ensure a tight connection and IP69K.

Torque wrench for M12-connector

# Teaching the code

Adam is without code in its factory setting mode and need to be programmed with the code from an Eva (General or Unique coded). The code of the first Eva detected by the Adam is automatically programmed as soon as Eva is within the detection distance. If Adam is programmed to accept an Eva with a general code, it will accept all Eva units with a general code. If it is programmed to accept an Eva with unique code, it will only accept the unique code of that specific Eva.

Note that it is possible to teach more than one Adam unit to accept the same Eva unit. This is for example applicable on a sliding door or for machine positioning.

#### Programming a new Adam without code, to accept a new Eva

- 1. Bring the Eva in the range of Adam.
- 2. Connect the Adam without code to the power supply.
- 3. The LED on Adam will turn green when the programming procedure is finished.

**Note!** The programming procedure is taking place only at startup of Adam. Eva must be in range at this time.

**Note!** If the teaching procedure fails, and no Eva code is programmed, Adam enters a fail-safe mode and its red LED starts flashing fast. Erase the code, cycle the power and restart the teaching code procedure.

**Note!** The Eva must not be removed during the teaching procedure.

#### Erasing existing codes from Adam M12-5

- 1. Remove Eva from Adam's detection range.
- 2. Disconnect the power supply on pin 1 on the Adam unit.
- 3. Connect +24 VDC to pin 2 and 4.
- 4. Connect the power supply on pin 1 on the Adam unit.
- 5. After 5-10 sec the light turns green, then immediately disconnect pin 2 and 4 from +24 VDC.
- 6. The Adam unit will now be reset, and its LED will flash red.
- 7. Follow normal installation procedure to install Adam again.

**Note!** If the pin 2 and 4 on the Adam unit is not disconnected from +24 VDC within 5-10 seconds, Adam enters the fail-safe mode and the red LED starts flashing fast. It is then necessary to restart the procedure from the beginning.

#### Erasing existing codes from Adam M12-8

- 1. Remove Eva from Adam's detection range.
- 2. Disconnect the power supply on pin 2 on the Adam unit.
- 3. Connect +24 VDC to pin 1 and 6.
- 4. Connect the power supply on pin 2 on the Adam unit.
- 5. After 5-10 sec the light turns green, then immediately disconnect pin 1 and 6 from +24 VDC.
- 6. The Adam unit will now be reset and its LED will flash red.
- 7. Follow normal installation procedure to install Adam again.

**Note!** If pin 1 and 6 on the Adam unit are not disconnected from +24 VDC within 5-10 s, Adam enters the fail-safe mode and the red LED starts flashing fast. It is then necessary to restart the procedure from the beginning.

#### Replacing Eva (Not needed for General to General switch)

When an Eva Unique should be replaced, the used one needs to be deleted from the Adam sensor. To delete Eva from the internal memory, follow the instructions in 'Erase existing codes from Adam M12-x'.

When Adam is reset and the LED flashes red: disconnect the power supply, move the new Eva within detection distance and reconnect the power supply again. The green LED is now on and the teaching of the new Eva's code into Adam is done.

### Testing the safety functions

Make sure the safety unit and safety module are working properly by following these steps:

- 1. Interrupt Eden output by moving Eva away from Adam. The LED will light red when Eva is out of range of Adam.
- 2. Interrupt the OSSD safety circuit before the unit to be tested. The LED will flash between green and red.
- 3. Move Eva to a position next to Adam. The LED will light green if the safety circuit(s) before this unit is not interrupted.
- 4. An additional function test can be made by slowly moving Eva away from Adam. The LED will flash fast green when Eva is 2 mm from the maximum detection distance to Adam.

# 7 LED indication

The non-safe status LED on Adam shows the status of the Eden sensor and the output status as follows:

LED on Adam	Description	Safety circuit
Green	Valid Eva within range	Closed
Flashing green	Valid Eva within range, waiting for reset	Open
Flashing red/green	Valid Eva within range, no valid in signal	Open
Red	Valid Eva out of range	Open
Fast flashing green	Valid Eva is within 2 mm from maximum detection distance	Closed
Fast flashing red	Fail safe mode	Open
Flashing red	No Eva programmed	Open
Flashing red/red/green	Input channel fault	Open

# 8 Maintenance

#### **Maintenance precautions**

Maintenance shall be done in accordance with a risk assessment for the individual application.

🕂 Warning!	The safety functions and the mechanics must be tested regularly, at least once every year to confirm that all the safety functions are working properly.
🕂 Warning!	In case of breakdown or damage to the product, contact ABB. Do not try to

repair the product. It might accidentally cause permanent damage, impairing the safety of the device and in turn lead to serious injury to personnel.

LED on Adam	Expected causes of faults	Corrective actions	
	Eva away from Adam	Move Eva closer to Adam	
Lights red	Metal between Adam and Eva	Remove the metal	
No light	Loss of power supply	Check +24 VDC / 0 VDC power supply	
Lights green/redNo input (Eva in position with Adam)		Check the unit before in the safety circuit (make it active).	
		1. Power cycle	
Fast flashing red	Fail safe mode	2. Erase and reteach code	
		3. Replace unit	
Fast flashing green At end of detection distance		Move Eva closer to Adam.	

### Troubleshooting

Warning! <u>Never</u> bypass the safety circuit. Always replace a defect unit with a new one.

Detergents, cleaners	Good
Water	
hot (> 80°C)	Poor
Environmental	
UV	Good

#### Very good

-Found unaffected in its performance with regard to time, temperature and stress.

#### Good

- Found acceptable in normal exposure.
- Long term exposure may result in minor loss of properties.
- Higher temperatures may result in major loss of properties.

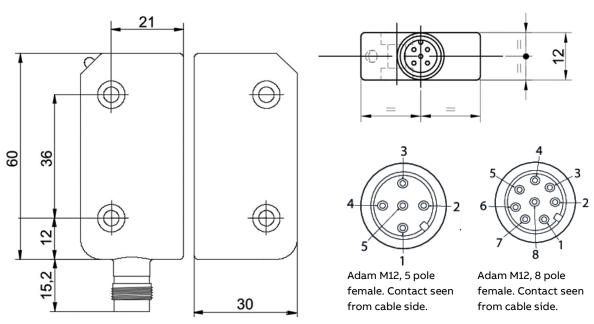

#### Fair

- Only for short exposures at lower temperatures or when loss of mechanical properties is not critical.

#### Poor

- Will result in failure or severe degradation.
