# General information

## APPLICATION

Low voltage current transformers are intended for supplying measuring instruments and protection circuits of electrical power devices with a maximum operating voltage of 0.72 kV and frequency of 50 Hz (or 60 Hz after prior arrangement with the manufacturer). Transformers of power utility installations. The transformers are manufactured for secondary currents 1A and 5A. The range of primary currents depends on the transformer and can range from 1 A up to 5,000 A.

## OPERATING CONDITIONS

The transformers are designed for operation in indoor equipment in climatic conditions: temperate (N3) or tropical (T3). The long-term thermal rated current and limits of deviations of these transformers correspond to an extended current range of 120% of  $I_{pn}$  within the ambient temperature range from 248 K (-25°C) to 328 K (+55°C). It is possible to produce some transformers with a 150% or 200% current range by special arrangement with the manufacturer.

## DESIGN

The low voltage current transformers are single-phase, low power transformers, operating in quasi short-circuit conditions and transforming the current flowing through the primary circuit to the current in the secondary circuit with a level of accuracy specified in relevant standards. Their insulation class is E or A and degree of protection IP20. The windings of the current transformers are enclosed in the housings made of heat and fire resistant material.

The current transformers are produced for different types of primary circuits: busbar or cable according to the transformer selection table (page 52). The range of primary currents is from 1 A up to 5000 A. Transformer types: IMW, IMP, IMS, IMR2 and ISW (with the exception of ISWc) have offer the option of a sealing cover for

secondary terminals. Transformers are permanently marked with the rated ratio on both sides of the casing. They have slides allowing assembly to the base and screws or holder for mounting on the current circuit. Equipment details are stated in the transformer selection table (page 50).

## MOUNTING

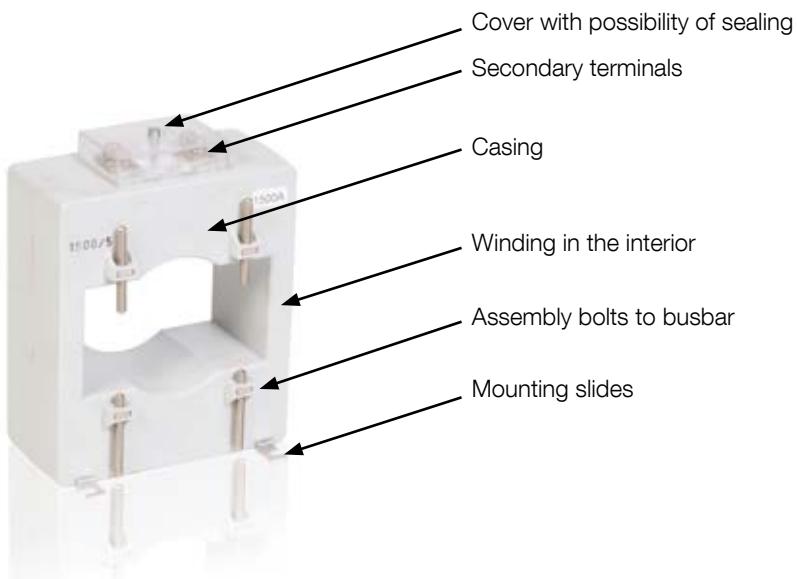

Low voltage current transformers can be mounted on:

- current busbars,
- TS35 mounting busbars,
- solid cables or cores of multicore cables,
- plates.

The current transformer can be mounted in any position. In order to mount a given type of transformer it should be drawn onto the busbar, next it should be fastened with the holders or mounting bolts to be found on both sides of the transformer. Mounting of the transformer on a plate, depending on the type, is made possible by two or four slides with which the device is furnished. A special base allows mounting on the TS35 mounting busbar. When mounting a transformer equipped with its own busbar, it should be fastened to the current circuit with the supplied bolt terminals with which the transformer busbar is furnished.

Low voltage current transformers cannot be used as support elements for current busbars (they cannot replace support insulators).

Details of mounting possibilities are indicated in the transformer selection table (page 52) and in the Accessories chapter (page 48).

# General information

## Packing, transport, storage

Current transformers transported over significant distances should be packed in wooden crates, that protect the devices from damage. Transformers transported for short distances can be transported by truck without packing, but should be protected from damage by separating them from other products. During loading and unloading, crates with transformers must not be thrown or turned over. Wooden crates should be appropriately marked, in accordance with requirements concerning transport of products susceptible to mechanical damage. Transformers should be stored in dry and clean locations at temperatures close to 20°C. Storage of transformers in wooden crates outdoors is not recommended. Waste packing material should be recycled utilised in suitable plants.

## Spare parts

Current transformers are unreparable devices. No spare parts are provided.

## Compliance with standards

- PN-EN 61869-2; PN-EN 61869-1,
- IEC 61869-2; IEC 61869-1

Transformers have IEN attestations and PTB approval.

## Warranty

The manufacturer grants a 24 month warranty for purchased transformers from the date of commissioning, however not longer than 30 months from the delivery date. The manufacturer is not liable for defects and damages arising as the result of:  
incorrect transport after receipt of transformers by the Ordering Party  
incorrect storage, installation and operation of transformers,  
inappropriate selection of transformers for a specific electric system.

## Handling used products

Due to the materials and technology used in their manufacture, transformers do not present a hazard to the environment. The used or damaged product should be disassembled, segregating parts of steel, non-ferrous metals, plastic and rubber. Segregated parts should be recycled or utilised at appropriate plants.

## Submitting an order

In order to submit an order the following data should be stated:

- transformer type,
- ratio –  $I_{pn}/I_{sn}$ ,  
 $I_{pn}$  – primary current,  
 $I_{sn}$  – secondary current,
- power in VA – MV,
- accuracy class,
- safety coefficient FS5 or FS10,
- climate in which the transformer will be installed: (moderate, tropical) – moderate is assumed by default,
- number of ordered pieces.

## Example of order:

Low voltage current transformer type IMSC, ratio 600/5 A/A;  
power 10 VA; class 0.5; FS5; pieces 300

## Simplified notation

	IMSC	600/5	10	–	0,5	FS5	pieces 300
type	_____	_____	_____	_____	_____	_____	_____
ratio	_____	_____	_____	_____	_____	_____	_____
power	_____	_____	_____	_____	_____	_____	_____
class	_____	_____	_____	_____	_____	_____	_____
security factor	_____	_____	_____	_____	_____	_____	_____
quantity	_____	_____	_____	_____	_____	_____	_____

# Transformer selection

In matching the current transformer with a measurement system a number of key factors must be considered.

## Primary current to be converted by the transformer

The nominal value of the primary current ( $I_{pn}$ ) should be selected from the offered series range of available types to provide the closest match with the expected primary current of the system. All low voltage transformers produced by ABB have an extended rating of 120% which makes conversion possible within a range 20% higher than the rated value.

## Secondary current

To adapt to the system found on the secondary side of the transformer.

5 A and 1 A are standardised values.

Note: primary current/secondary current ( $I_{pn}/I_{sn}$ ) is the standard transformer ratio.

## Power – the transformer load

The total load that will be connected to the transformer should be considered, including the load from the connected device as well as losses on connection leads and terminals. According to the standard IEC 61869-2 the current and angle errors of the transformer should not exceed values given in table 1 at any secondary load in the range from 25% to 100% of the rated load.

## Dimensions of the transformer internal opening and external dimensions

Specified to ensure that it is possible to install the transformer on the current circuit and that it can be accommodated in the planned locations.

## Selection of accuracy class to obtain satisfactory measurement accuracy

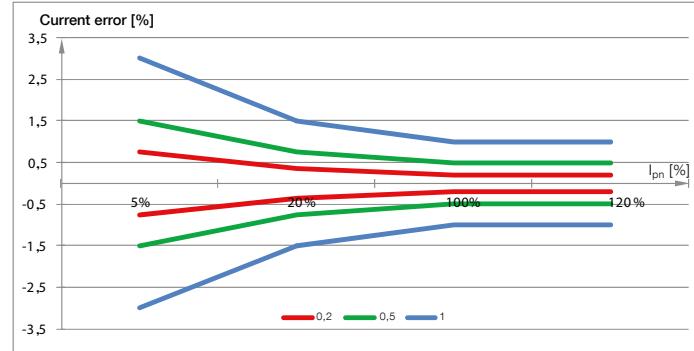

In many systems, transformer applications can be analysed according to class 0.2S or 0.5S. It is then possible to obtain more accurate current conversion of values significantly lower than the transformer rated value, up to 1% of the rated current value.

Table 1. Limits of current and phase errors of current transformers acc. to IEC 61869-2

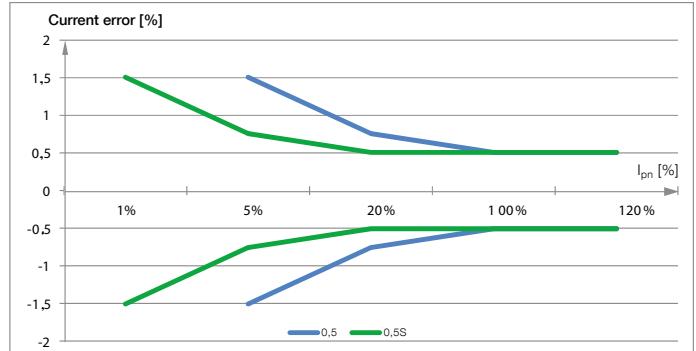

Accuracy class	% $I_{pn}$ – percent of rated primary current											
	1	5	20	100	120	1	5	20	100	120		
	Current error in percent +- percent					Angle error +- minutes						
0.2	–	0.75	0.35	0.2	0.2	–	30	15	10	10	10	10
0.5	–	1.5	0.75	0.5	0.5	–	90	45	30	30	30	30
0.2S	0.75	0.35	0.2	0.2	0.2	30	15	10	10	10	10	10
0.5S	1.5	0.75	0.5	0.5	0.5	90	45	30	30	30	30	30
1	–	3	1.5	1	1	–	180	90	60	60	60	60

a) classes 0.2; 0.5; 1

b) comparison of classes 0.5 and 0.5S

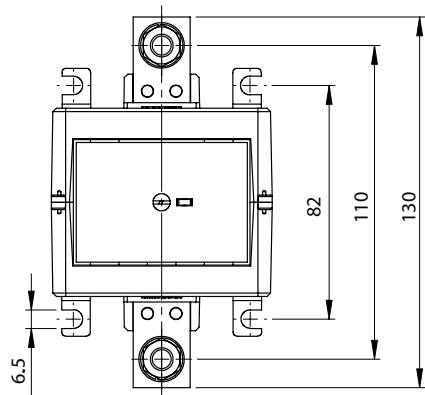

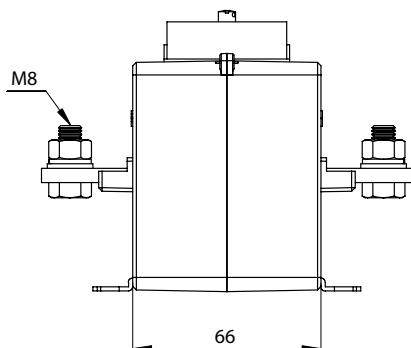

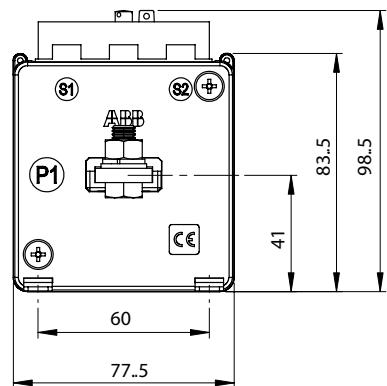

# Transformers type IMW with primary winding

Current transformers with their own primary wiring, intended for installation in supply system current circuits. Busbars or cables can be screwed to the primary terminals of these transformers. They allow high accuracy current conversion from the lowest values. Primary current range from 1 A to 300 A.

It is possible to order transformers of other parameters after prior arrangement with the manufacturer.

# Transformers type IMSd

Current transformers designed for placing on current busbars of maximum dimensions 120 x 30 mm or 100 x 50 mm. Also allows a cable of maximum 85 mm diameter to be pulled through. The transformer allows conversion of high currents and high powers. Can perform measurement class and protection class functions.

It is possible to order transformers of other parameters after prior arrangement with the manufacturer.  
 There is a possibility of performing by special order transformers with protection classes.

# Transformers type IMPa

Current transformers for cables of maximum 20 mm diameter. The transformer is equipped with a holder enabling it to be assembled on current busbars of maximum dimensions 20 x 10 mm.  
Primary current range from 100 A to 300 A.

## Dimensional drawing

It is possible to order transformers of other parameters after prior arrangement with the manufacturer.

## Transformers type ISWd2

Current transformers designed for mounting on current busbars of maximum dimensions 80 x 30 mm (horizontal) or 60 x 30 mm (vertical) and a cable of maximum 55 mm diameter. Primary current range from 1000 A to 1600 A. The special transformer window shape allows various busbar locations.

\*dimension A = 60

# Transformers type IMR0

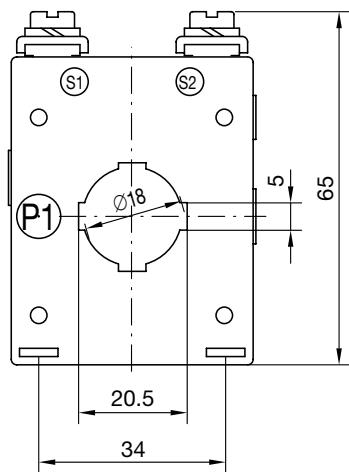

Current transformers of small dimensions designed for mounting on a cable or busbar. Applied mainly for control measurements. Primary current range from 50 A to 200 A.

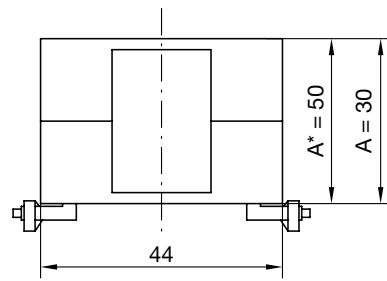

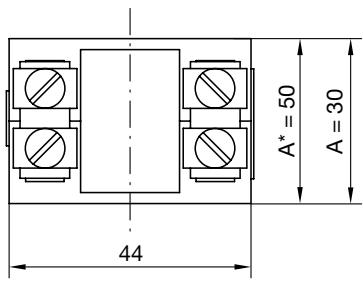

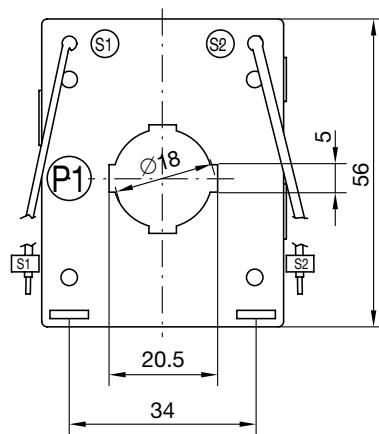

## Dimensional drawing

IMR0 – current transformers for a cable max 18 mm or a busbar max 20 x 5 mm.

Version with secondary terminals

Version with leaded cables LYc  
length approximately 20 cm

Type	Class	$I_{pn}$ [A]	$I_{sn}$ [A]	Security factor FS					Rated operation current short-time thermal $I_{th}$ [A]	$I_{dyn}$ [A]	Maximum permissible voltage $U_m$ [kV]	Rated test voltage $U_p$ [kV]	Weight (approx.) [kg]

It is possible to order transformers of other parameters after prior arrangement with the manufacturer.

\*depth A=50 mm

# Transformers type IMR1a

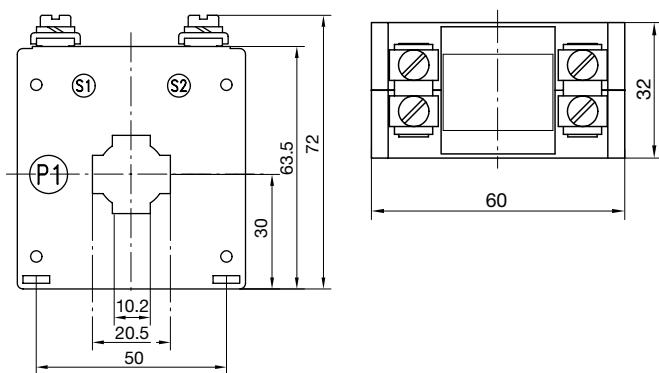

Current transformers of small dimensions designed for mounting on a cable or busbar. Applied mainly for control measurements. Primary current range from 75 A to 400 A.

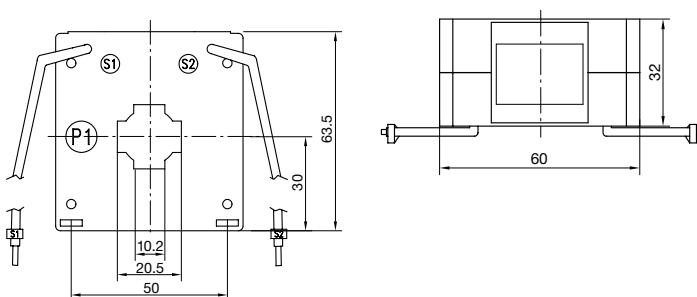

## Dimensional drawing

IMR1a – current transformers for a cable max 18 mm or a busbar max 20 x 10 mm.

Version with secondary terminals

Version with leaded cables LYc length approximately 20 cm

Type	Class	$I_{pn}$ [A]	$I_{sn}$ [A]	Security factor FS						Rated operation current short-time thermal $I_{th}$ [A]	$I_{dyn}$ peak [A]	Maximum permissible voltage $U_m$ [kV]	Rated test voltage $U_p$ [kV]	Weight (approx.) [kg]

# Transformers type IMR1b

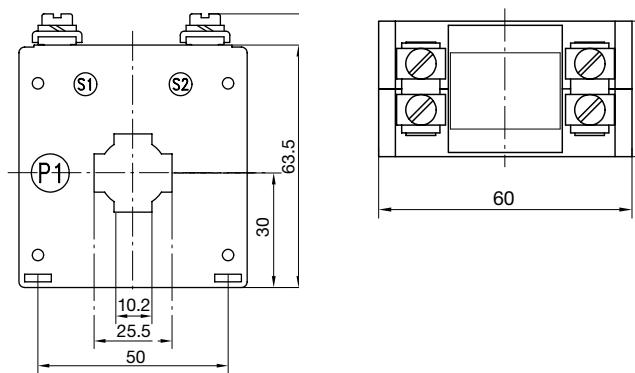

Current transformers of small dimensions designed for mounting on a cable or busbar. Applied mainly for control measurements. Primary current range from 100 A to 500 A.

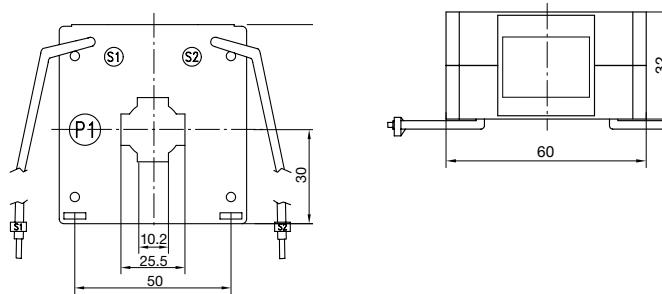

## Dimensional drawing

IMR1b – current transformers for a cable max 23 mm or a busbar max 25 x 10 mm.

Version with secondary terminals

Version with leaded cables LYc length approximately 20 cm

It is possible to order transformers of other parameters after prior arrangement with the manufacturer.

# Accessories

## Voltage terminal

Transformers (excluding IMSd) can be equipped with a voltage terminal. It is an element not connected inside the transformer. It is used to connect the voltage circuit from the busbar to the terminal and then to the measurement system.

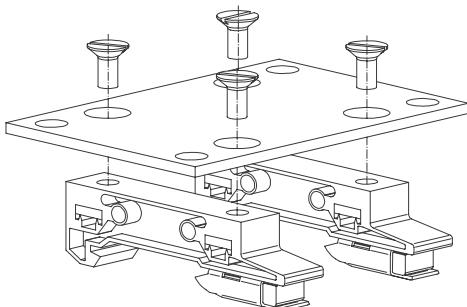

In transformers equipped with a cover there is the option of sealing this connection under the cover together with current circuit connections.

The voltage terminal comes as part of a set with the busbar, to which it is connected by a permanently mounted lead.

## Support for mounting the transformer on a TS35 mounting busbar

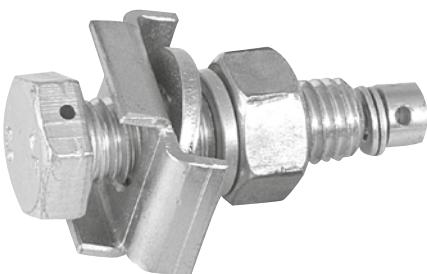

The mounting support allows mounting of some types of transformers on the TS35 mounting busbar (details in the transformer selection, table on page 52).

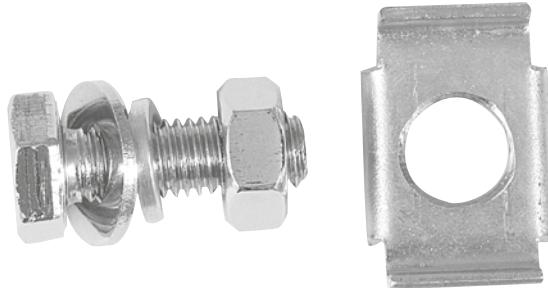

Sketch drawing of the mounting base

## Busbar mounting assembly

Bolt M12 with openings for sealing, with a holder for 30 mm or 60 mm busbars.

Standard bolt M12 with holder for 30 mm or 60 mm busbar

## Copper sleeve

Sleeve dimension Ø 20/Ø 13 length 46 mm. Other dimensions available to special order.

## Busbars

Copper nickel plated busbars with a set of assembly bolts.

## Standard busbars

Busbar dimension [mm]	Number of bolts	Bolt dimension
20x5x150	2	M10
20x10x150	2	M10
30x5x150	2	M12
30x10x150	2	M12
40x5x150	2	M12
40x10x150	2	M12
60x5x150	2	M12
60x10x150	2	M12
80x8x230	4	M12
80x10x230	4	M12

It is possible to order busbars of other dimensions after prior arrangement with the manufacturer.
