

PRODUCT LIFE CYCLE STATUS STATEMENT

ACS1000 air-cooled (Generations 1) after AMC34 Upgrade Level, ACS1000 water-cooled (Generation 1) after AMC34 Upgrade Level

The ABB life cycle management model is designed to manage an orderly transition to new replacement products or to choose from various lifetime extending services. At the same time the model ensures access to continuing support for our customers.

Current life cycle status

The mentioned product sub-types of ACS1000 drive are in Classic phase according to the ABB life cycle model outlined above.

Life cycle plan

There is no plan to change the life cycle status of this product subtype.

ABB will adequately inform about life cycle phase transition from Classic to Limited life cycle phase prior to change.

ABB's promise is to keep this product subtype at least 10 years in Classic life cycle phase after the last unit has been delivered or to provide an Upgrade service to extend the full life cycle support to at least 10 years.

Product availability in Classic life cycle phase

This product subtype is not available for sale. It represents drive's installations where the recommended Life cycle upgrade services were applied.

Recommended actions

Besides the regular maintenance it is recommended to check the possibility for Option Upgrade service in order to respond to specific customer needs and/or changed process requirements.

Due to the shorter life cycle of the control hardware, ABB strongly recommends combining the main board upgrade service (if available) with the 10-year preventive maintenance.

Service availability in Classic life cycle phase

See details at new.abb.com/drives/Services and contact your local ABB representative for availability.

Available Services

Service Agreements

Training (e-learning, classroom, on-site)
