

Did you know we help the world's largest container ships save fuel?

Maersk's "Triple-E" class of container vessels are capable of carrying 18,270 twenty-foot standard containers. The Triple-E stands for the class's three design principles: economy of scale, energy efficient and environmentally

improved. ABB Measurement & Analytics was contracted to supply a combustion control solution to minimize and monitor fuel usage in their twin 8-cylinder diesel engines as part of this new design philosophy.
