

EDS PowerCon Release Notes

This Release Notes contain all news and modifications of the software EDS PowerCon and the included enclosure systems

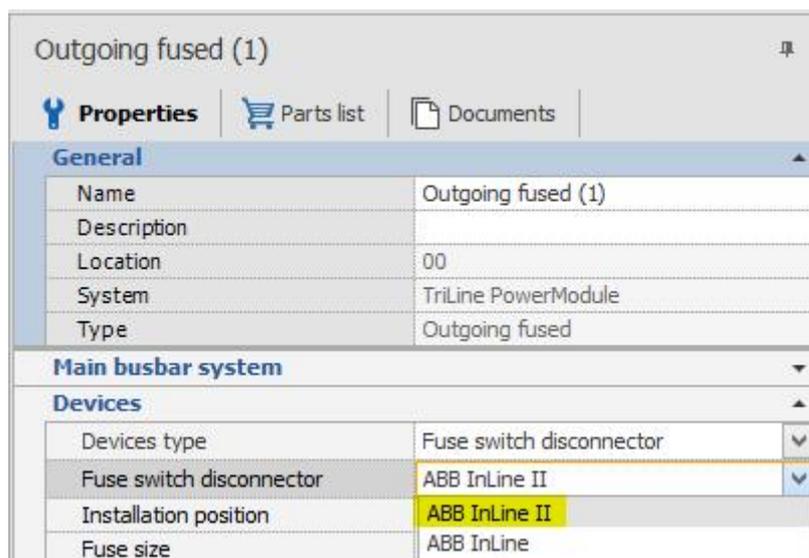

You can check your actual installed systems in the menu **Help → About**

 Available systems / support

Version 10.1.597.5 with TriLine Power Module V4.5.1

What's New

- New device fuse switch disconnecter ABB “InLine II”

- Update of mounting instructions and copper drawings

Fixed Bugs

- Fixed minor bugs

Common Notes:

1. Licenses

In the software menu (Menu → Help → Licensing) it is possible to generate a license request for some special reasons. Mostly this step isn't necessary.

In case you can see in the configurator that the software runs out within 14 days, you have to fill out the license dialog of the configurator.

2. Setup Hints

The installation has to be done on a local hard disks. Mapped network drives and UNC path will not be supported. Projects can be stored within a network folder

We recommend to install the application based on the default parameters
