

# Providing tailor-made power security A modular UPS keeps power availability costs under control

ABB's innovative modular UPS design helps you keep Total Cost of Ownership (TCO) under control – while providing best-in-class UPS functionality. Just install the modules you

need and add more later, as required – that way you just power and cool as much UPS as you need. Best-in-class energy efficiency helps keep costs down, too. And because

the modular design is compact, you'll use less real estate. Modules are simple to install and maintain. Get measured now at [www.abb.com/ups](http://www.abb.com/ups)
