

PRODUCT NOTE

New water-cooled motor in frame size 500

For offshore and onshore applications

—
01 Water-cooled motor in frame size 500 is an ideal choice for marine, mining, minerals and water & wastewater applications.

The new water-cooled M3LP motor is rated from 800 kW up to 2000 kW with voltage 690 V, 50/60 Hz and it is available in 4, 6 and 8 pole versions with maximum speed of 1800 rpm.

Available mounting configurations are foot mounting B3, flange mounting V1 and foot/flange mounting B35.

Platform

The new water-cooled M3LP 500 motor is based on ABB's well-proven induction platform with low-voltage motor technology. It shares the same mechanical design as ABB's other water-cooled motors.

The new motor was designed with special consideration to the needs of the marine industry. It adds a crucial component in ABB's motor range, allowing customers in the marine industry to turn to ABB for total electric solutions for top-of-line vessels.

ABB's new frame size 500 low-voltage motor is an ideal choice for applications where reliable and powerful operation is required. The new motor is robust, compact, economical and simple in design.

Compactness, high power density and harsh environments are the key requirements for marine industry but also crucial for other industries and applications, such as mining, minerals, water and wastewater and manufacturing.

Main features

The new motor meets today's multi industry requirements answering to demands for space and high power:

- Compact size and high output/power ratio
- Low noise level – water cooling with no external fan
- Extension to water cooled motor range
- Cost-effective solution based on low voltage-technology

Technical data

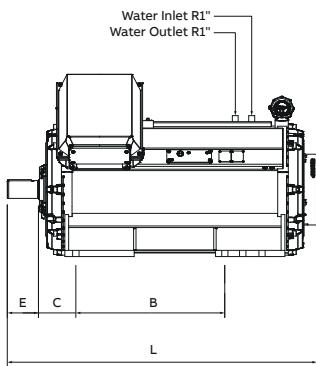

Water-cooled low voltage motor M3LP 500
