
MEASUREMENT & ANALYTICS

Did you know we analyze emissions of the world's most unique waste-to-energy plant?

A new waste-to-energy plant outside Copenhagen is the most innovative concept for waste management and energy production worldwide. The plant features a ski slope, plus emits “smoke rings” so that residents can visually calculate their

environmental impact. Just to be sure, ABB Measurement & Analytics was contracted to provide a slightly more accurate emissions monitoring system that is required for regulatory compliance.
