## M2M

It is always possible to give efficiency a value

The solution for the measuring and the analysis of electric parameters for all distribution solutions both in medium and low voltage: the new M2M network analyzers, compact and easy to install, both consumed and produced energy in a very clear way on the high-visibility display, expressed both in currency and in kg of CO<sub>2</sub>. This helps to always have the effective consumption of a system under control, even remotely, thanks to various communication protocols. Furthermore M2M enables the optimization of performance whilst avoiding energy waste. This, in turn, will lead to a reduced environmental impact while increasing energy efficiency.
