What's New Machining PowerPac 5.13.01

New Features

New Option 'Miniclipping without Lifting' for Path Connection Type

This option is similar to the 'Miniclipping' option.

The difference between them is that:

1) The End targets in 'Miniclipping' are deleted in this new option;

2) The last Via target of each path in 'Miniclipping' is replaced with an End target in this new option.

By this option, the tool can keep on staying on the surface until the end of a solution.
