

# Did you know we helped Tower Bridge open over 10,000 times?

London's historic Tower Bridge across the Thames river, opened in 1894, operates more smoothly these days thanks to an ABB load monitoring system. Its 200-foot span draw-bridge opens to allow passage of shipping, but modern

traffic weight loads and volumes over the bridge were causing stress on its mechanism. The bridge operators turned to ABB Measurement & Analytics for a solution that minimizes wear and tear by using specialized load cells to monitor weight.
