General information

Package benefits

Lowest energy bill with maximum availability

Traditional IE2 induction motor

IE4 super premium efficiency

The heart of the synchronous reluctance motor and drive package is a magnet-free efficiency-optimized synchronous reluctance motor. The draft standard IEC 60034-30-1 Edition 1.0 specifying IE classes applies exclusively to motors rated for line operation, which is not the case for ABB synchronous reluctance motors. Therefore, the motor does not have an IE class marking on the rating plate.

So why call the package an IE4? Because its package efficiency at the nominal operating point is the same or higher than that of a motor and drive package utilizing a motor with line-operated IE4 classification. An additional benefit related to synchronous reluctance motors is their excellent partial load efficiency performance compared to induction motors.

IE4 SynRM motor and drive package

Verified package efficiency

For the first time, you don't have to guess the combined energy consumption of the motor and drive for a given output power. The SynRM motor and drive package is measured to verify efficiency. When comparing efficiencies between different alternatives, make sure you're looking at efficiency values for the whole package and all the speeds that will be run. Read more about package efficiency on page 8.

Upgrade system efficiency without mechanical modifications

Unlike many other IE4 motors, most synchronous reluctance motors follow harmonized Cenelec size and output combinations. This means that upgrading to the highest efficiency level is easy and straightforward, and there is no need for mechanical modifications, which keeps the payback time of the total investment very short.

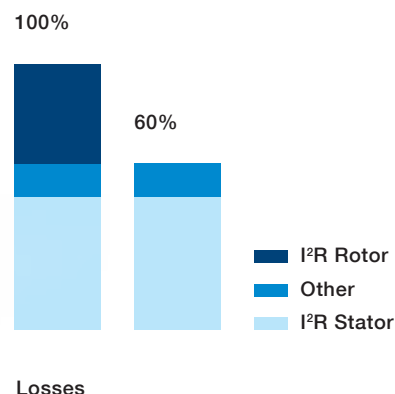

Ultimate efficiency and reliability to optimize your cost of ownership

Traditional IE2 induction motor

IE4 SynRM motor

Innovation inside

The idea is simple. Take a conventional, proven stator technology and a totally new, innovative rotor design. Then combine them with a best-in-class industrial drive loaded with new, purpose-designed software.

Magnet-free design - Easy service

Synchronous reluctance technology combines the performance of the permanent magnet motor with the simplicity and service-friendliness of an induction motor. The new rotor has neither magnets nor windings and suffers virtually no power losses. And because there are no magnetic forces in the rotor, maintenance is as straightforward as with induction motors.

Superior reliability to minimize the cost of not running

IE4 synchronous reluctance motors have very low winding temperatures, which increases the reliability and lifetime of

the winding. More importantly, the cool synchronous reluctance rotor means significantly lower bearing temperatures – an important factor because bearing failures cause about 70 percent of unplanned motor outages.

Winner of the 2011 Automation Award – The 'Automations Oscars'

The new motor and drive package won Germany's most important automation award at the SPS/IPC/DRIVES trade show in Nuremberg.

SynRM technology is also available in high output motor and drive packages with up to two frame sizes smaller motor. To learn more, visit www.abb.com.

ACS880 drive highlights

ACS880 drive highlights

- An all-compatible drives range for numerous industries and applications: paper machines, processing lines, pumps, fans, compressors, and conveyors, among others.
- Compact design for easy installation, commissioning, and maintenance.
- Enclosure classes IP21, IP22, IP42, IP54 and IP55 for various ambient conditions.
- Integrated safety, including the safe-torque-off (STO) feature as standard.

- A memory module stores drive settings and can be installed in a new drive by anyone on the site.
- Supports various motor types: induction, permanent magnet, and synchronous reluctance motors.
- Direct torque control (DTC) – ABB's signature motor control technology provides precise speed and torque control also without any feedback devices like encoders or position sensors.

Other drives are also available. Consult ABB Drives for the latest SynRM-compatible frequency converter offering.

ACS850 drive highlights

ACS850 drive highlights

- Designed to meet the production and performance needs of machine builders, system integrators and end users in a broad range of applications.
 - Modular structure with a wide range of options means that users need to purchase only the features they require.
 - Can run induction, permanent magnet, and synchronous reluctance motors, so it can be deployed on other motors if needed.
 - A compact and convenient memory module stores drive settings and can be installed in a new drive by anyone on the site.
- Slim design means the drive occupies the minimum cabinet space.
 - Drive setup simply involves entering the parameters from the motor rating plate just as with an induction motor. No encoders, position sensors or other feedback devices are needed.
 - Direct torque control (DTC) – ABB's signature motor control technology provides precise speed and torque control also without feedback.

Other drives are also available. Consult ABB Drives for the latest SynRM-compatible frequency converter offering.

Removable control panel

Removable memory unit

Why settle for high motor efficiency?

Using a motor with the highest efficiency class together with speed control is a good start when it comes to minimizing your energy bill.

However, the IE class only indicates motor efficiency with a sinusoidal supply at nominal speed and power. This information is not relevant when calculating energy consumption in variable speed applications. Accurate calculations demand efficiency data for the whole motor-drive package and for the entire speed range.

Now – for the first time in the industry – ABB offers you the means to calculate actual energy consumption with a measured efficiency curve for the motor and drive package. Log the operating profile and energy consumption of your present system and calculate the energy consumption with the new IE4 SynRM package.

This time your calculations will be based on facts, not assumptions.

IE4 synchronous reluctance motors

Loadability

Torque characteristics of the SynRM motor

Efficiency & MEPS

International minimum efficiency performance standards (MEPS) for measuring the efficiency of VSD-only types of motors - such as synchronous reluctance motors - are under development. No local MEPS efficiency requirements for VSD-only motors have been issued by November 2014.

Service

Servicing synchronous reluctance motors is as straightforward as with induction motors. The winding technology is identical to induction motors. The rotor does not include any magnetic materials, which means that the motor can be disassembled and serviced using the same procedure as for conventional induction motors. For test runs, SynRM capable frequency converter is needed.

Why motor and drive package

New technology motors are more challenging from the control point of view than traditional induction motors. When selecting a new technology motor and drive package, it is important to ensure that the package is suitable for the application and that the drive has the right control software. The performance of synchronous reluctance motors is verified with an ABB drive. Performance and functionality with other drives cannot be guaranteed.

Package selection

The technical data section lists matching motor and drive packages for easy package selection for pump and fan applications. Refer to ABB for package selection for other speeds or applications, or use the Drive-Size software.

Insulation protection

Synchronous reluctance motors have the same stator winding insulation as other ABB low voltage motors. The insu-

lation is approved for 500 V VSD supply. For voltages above 500 V, follow ABB's instructions regarding the correct insulation system and the output filters of the drive.

Bearing currents

Synchronous reluctance motors rated above 100 kW are equipped with one insulated bearing as standard, which together with the correct cabling is sufficient to secure trouble-free operation up to 350 kW. Above 350 kW the drive should be equipped with a common-mode filter as an additional measure.

Cabling, grounding, and EMC

Synchronous reluctance motors are not equipped with EMC filters as standard. The variant code to order EMC cable glands is +704.

The use of a frequency converter sets higher demands on the cabling and grounding of the drive system. In other than exceptional circumstances, the motor must be cabled with shielded symmetrical cables and cable glands providing 360-degree bonding (EMC glands). For motors up to 30 kW, asymmetrical cables can be used, but shielded cables are always recommended, especially if there are sensitive components in the driven application.

For motors from frame size 280 upwards, additional potential equalization is needed between the motor frame and machinery, unless the motor and the driven machine are installed on a common steel base. When a steel base is used for potential equalization, the high frequency conductivity of the connection must be checked. For more information, see the ABB manual "Grounding and cabling of drive systems", 3AFY61201998 Rev C.

To meet EMC requirements, special EMC cables must be used in addition to the correct cable gland mounting, with additional special earthing pieces. For more information, refer to drive manuals.

Synchronous reluctance motor technology

Introduction

The synchronous reluctance motor is a three-phase electric motor with a magnetically anisotropic rotor structure. In the four-pole version, the rotor has four high- and four low-permeance axes. High permeance means high magnetic conductivity and higher inductance, while low permeance means lower inductance.

Reluctance is the inverse of permeance and is, in practical terms, magnetic resistance; high reluctance results in low inductance. The axes with high permeance can be referred to as the direct or d-axis, while the axes with high reluctance can be referred to as the quadrature or q-axis.

The figures below show cross-sectionals of a synchronous reluctance motor. The different axes in the rotor are identified in the figure on the right.

Cross-sectional illustration of a four-pole synchronous reluctance motor (left), and the definition of the magnetic d- and q-axes of its rotor (right).

Functional principle

When a magnetic field is produced in the air gap by applying exciting currents to the stator windings, the rotor will strive to align its most magnetically conductive axis, the d-axis, with the applied field, in order to minimize the reluctance in the magnetic circuit. In other words, torque is produced in the air gap between the stator and rotor whenever the applied field vector and the d-axis of the rotor are not aligned.

The magnitude of the vector field and the speed of its rotation can be controlled by a frequency converter. The high saliency of the rotor means that its angular position can be simply detected by a sensorless control. Expensive absolute encoders, resolvers, and other rotational sensors are therefore not required.

The sensorless control system keeps track of the rotor's angular position in relation to the stator and creates a vector field with accurate magnitude and rotational speed in accordance with the control reference signals dictated by the load.

Since performance is dependent on the information about the rotor's position, the motor needs a frequency converter; it cannot be started with a direct-on-line supply. The rotor runs in synchronism with the applied vector field, striving to minimize reluctance in the magnetic circuit that is present. This functional principle has given its name to the technology – synchronous reluctance.

Synchronous reluctance motors run smoothly due to the sinusoidal air gap field distribution and operation with sinusoidal current.

Rotor design

The rotor design of a synchronous reluctance motor comprises electric steel plates stacked together to form a rotor package. The electric steel plates have punched holes as flux barriers, as illustrated in the figures on the previous page.

The torque produced by the motor is proportional to the difference between the inductances on the d- and q-axes: the greater this difference, the greater the torque production. The synchronous reluctance motor is therefore designed with magnetically conductive material, iron, in the d-axis and magnetically insulating material, air, in the q-axis.

As the rotor has no windings and consequently no joule losses, it runs considerably cooler and with better efficiency than the rotor in an induction motor. The cool running of the rotor also means lower bearing temperatures, which in turn increase the reliability of the bearing system.

Further considerations

Eliminating rotor joule losses in the synchronous reluctance motor has led to compact construction, good efficiency levels and cooler bearing temperatures. The main disadvantage of this technology is that the motor's power factor is generally not as good as with induction motors.

Since there is always a frequency converter between the motor and the grid, the lower power factor is not apparent on the grid side and consequently does not have an impact on the grid supply dimensioning. However, the lower power factor may sometimes mean that a frequency converter with a higher current rating is needed.

The stator and frame design are based on proven induction motor technology, and the rotor consists of only iron and air. The lack of windings and permanent magnets in the rotor eliminates potential faults associated with these components, resulting in robust motor technology optimized for industrial variable speed applications.

Ordering information

When placing an order, specify motor type, size, and product code according to the following example.

Technical data

IE4 synchronous reluctance motors, 1000 r/min

This table presents technical performance data for the currently available IE4 motor and drive packages. Variant codes and construction details are based on the M3BP Process performance motors.

Output kW	Motor type	Product code	Speed n_N r/min	Motor Efficiency with VSD supply	Current I_N A	Torque T_N Nm	Torque T_{OL}/T_N Nm	Max speed n_{max} r/min	Inertia J kgm ²	Weight m kg	Suggested ACS880 SynRM package frequency converter for light duty (**no overload)	Package efficiency IE4 SynRM & ACS880 $T_N = 100\%$, $n_N = 100\%$	Typical package efficiency IE2 IM & ACS880 $T_N = 100\%$, $n_N = 100\%$
1000 r/min (33 Hz)			400 V network

** Consult ABB for motor and drive dimensioning for applications with other load characteristics.

Variant codes

IE4 synchronous reluctance motors

Variant codes specify additional options and features to the standard motor. The desired features are listed as three-digit variant codes in the motor order. Note also that there are variants that cannot be used together. In case of some variants, applicability depends not only on frame size but on package length (SM, ML, etc.).

		Frame size							
Code	Variant	132	160	180	200	225	250	280	315
Administration									
530	Two-year extension on standard warranty	-	-	-	-	-	-	•	•
531	Sea freight packing	-	•	•	•	•	•	•	•
532	Packing of motor in vertical mounting position	-	-	-	-	-	-	•	•
533	Wooden sea freight packing	-	•	•	•	•	•	•	•
590	Mounting of customer supplied part other than coupling.	-	-	•	•	•	•	•	•
999	Case specific design requiring a quotation	•	•	•	•	•	•	•	•
Balancing									
423	Balanced without key.	•	•	•	•	•	•	•	•
424	Full-key balancing	•	•	•	•	•	•	•	•
Bearings and Lubrication									
036	Transport lock for bearings.	•	•	•	•	•	•	•	•
037	Roller bearing at D-end.	•	•	•	•	•	•	•	•
039	Cold-resistant grease	-	-	-	-	-	-	•	•
040	Heat-resistant grease	-	-	-	-	-	-	•	•
041	Bearings regreasable via grease nipples.	•	•	•	•	○	○	○	○
043	SPM compatible nipples for vibration measurement	•	•	•	•	○	○	○	○
057	2RS bearings at both ends.	•	•	•	•	•	•	-	-
058	Angular contact bearing at D-end, shaft force away from bearing.	•	•	•	•	•	•	•	•
059	Angular contact bearing at N-end, shaft force towards bearing.	•	-	-	-	-	-	•	•
060	Angular contact bearing at D-end, shaft force towards bearing.	-	-	-	-	-	-	•	•
061	Angular contact bearing at N-end, shaft force away from bearing.	-	-	-	-	-	-	•	•
107	Pt100 2-wire in bearings.	-	•	•	•	•	•	•	•
128	Double PT100, 2-wire in bearings	-	-	-	-	-	-	•	•
129	Double PT100, 3-wire in bearings	-	-	-	-	-	-	•	•
130	Pt100 3-wire in bearings.	-	-	-	-	-	-	•	•
194	2Z bearings greased for life at both ends.	○	○	○	○	•	•	-	-
420	Bearing mounted PTC thermistors.	-	-	-	-	-	-	•	•
433	Outlet grease collector	-	-	-	-	-	-	•	•
506	Nipples for vibration measurement : SKF Marlin Quick Connect stud CMSS-2600-3	-	•	•	•	•	•	•	•
654	Provision for vibration sensors (M8x1)	-	•	•	•	•	•	•	•
796	Grease nipples JIS B 1575 PT 1/8 Type A	-	•	•	•	•	•	•	•
797	Stainless steel SPM nipples	•	•	•	•	•	•	•	•
798	Stainless steel grease nipples	-	•	•	•	•	•	•	•
799	Grease nipples flat type DIN 3404, thread M10x1	-	•	•	•	•	•	•	•
800	Grease nipples JIS B 1575 PT 1/8" pin type	-	•	•	•	•	•	•	•
Branch standard designs									
178	Stainless steel / acid proof bolts.	•	•	•	•	•	•	•	•
204	Jacking bolts for foot mounted motors.	-	-	-	-	-	-	•	•
209	Non-standard voltage or frequency, (special winding).	•	•	•	•	•	•	•	•
217	Cast iron D-end shield (on aluminum motor).	•	-	-	-	-	-	-	-
425	Corrosion protected stator and rotor core.	-	-	-	-	-	-	•	•
Cooling system									
053	Metal fan cover.	•	○	○	○	○	○	○	○
068	Light alloy metal fan	•	•	•	•	•	•	•	•

○ = Included as standard

• = Available as option

- = Not applicable

Code	Variant	Frame size							
		132	160	180	200	225	250	280	315
075	Cooling method IC418 (without fan).	•	-	-	-	-	-	-	-
183	Separate motor cooling (fan axial, N-end).	•	•	•	•	•	•	•	•
189	Separate motor cooling, IP44, 400V, 50Hz (fan axial, N-end).	-	•	•	•	•	•	-	-
206	Steel fan	-	-	-	-	-	-	•	•
422	Separate motor cooling (on top) with integrated fan motor	-	-	-	-	-	-	•	•
514	Separate motor cooling (fan on top)	-	-	-	-	-	-	•	•
791	Stainless steel fan cover	-	-	-	-	-	-	•	•
Coupling									
035	Assembly of customer supplied coupling-half.	-	-	-	-	-	-	•	•
Documentation									
141	Binding 2D main dimension drawing.	-	•	•	•	•	•	•	•
374	Binding 2D motor detailed drawing	-	•	•	•	•	•	•	•
722	Rotor dimension drawing (incl. torsional stiffness)	-	•	•	•	•	•	•	•
Drain holes									
065	Plugged existing drain holes.	•	•	•	•	•	•	•	•
448	Draining holes with metal plugs.	-	-	-	-	-	-	•	•
Earthing Bolt									
067	External earthing bolt.	•	○	○	○	○	○	○	○
Heating elements									
450	Heating element, 100-120 V	•	•	•	•	•	•	•	•
451	Heating element, 200 - 240 V	•	•	•	•	•	•	•	•
Insulation system									
405	Special winding insulation for frequency converter supply.	-	•	•	•	•	•	•	•
Mounting arrangements									
008	IM 2101 foot/flange mounted, IEC flange, from IM 1001 (B34 from B3).	•	-	-	-	-	-	-	-
009	IM 2001 foot/flange mounted, IEC flange, from IM 1001 (B35 from B3).	•	•	•	•	•	•	•	•
047	IM 3601 flange mounted, IEC flange, from IM 3001 (B14 from B5).	•	-	-	-	-	-	-	-
048	IM 3001 flange mounted, IEC flange, from IM 3601 (B5 from B14).	•	-	-	-	-	-	-	-
066	Modified for specified mounting position differing from IM B3 (1001), IM B5 (3001), B14 (3601), IM B35 (2001), IM B34 (2101)	•	•	•	•	•	•	•	•
200	Flange ring holder.	•	-	-	-	-	-	-	-
236	Flange FT 165.	•	-	-	-	-	-	-	-
243	Flange ring FF 215.	•	-	-	-	-	-	-	-
244	Flange ring FT 215.	•	-	-	-	-	-	-	-
253	Flange ring FF 265.	•	-	-	-	-	-	-	-
254	Flange ring FT 265.	•	-	-	-	-	-	-	-
255	Flange FF 265.	•	-	-	-	-	-	-	-
305	Additional lifting lugs.	-	•	•	•	•	•	•	•
Noise reduction									
055	Noise reduction cover for foot mounted motor	-	-	-	-	-	-	•	•
Painting									
105	Paint thickness report.	-	•	•	•	•	•	•	•
114	Special paint color, standard grade	•	•	•	•	•	•	•	•
115	Painting system C4M acc. to ISO 12944-2: 1998.	-	•	•	•	•	•	•	•
168	Primer paint only.	-	•	•	•	•	•	•	•
710	Thermally sprayed zink metallizing with acrylic top coat	-	•	•	•	•	•	•	•
754	Painting system C5M acc. to ISO 12944-2:1998	-	•	•	•	•	•	•	•
Protection									
005	Protective roof, vertical motor, shaft down.	•	•	•	•	•	•	•	•
072	Radial seal at D-end. Not possible for 2-pole, 280 and 315 frames	•	•	•	•	•	•	•	•
073	Sealed against oil at D-end.	-	•	•	•	•	•	•	•
158	Degree of protection IP65.	•	•	•	•	•	•	•	•
401	Protective roof, horizontal motor.	-	•	•	•	•	•	•	•
403	Degree of protection IP56.	•	•	•	•	•	•	•	•
404	Degree of protection IP56, without fan and fan cover.	•	•	•	•	•	•	-	-

Mechanical design

Motor frame and drain holes

Motor frame

Motor size 132 have aluminum alloy stator frame with integrated aluminum feet and terminal box. Motor sizes 160 and above have cast iron frame and feet and a removable terminal box. Integrated feet provide rigid mounting and minimize vibration.

Motors can be supplied for foot mounting, flange mounting, and combinations of these.

Drain holes

Motors that will be operated in very humid or wet environments, and especially under intermittent duty, should be provided with drain holes. The IM designation, such as IM 3031, determines the intended mounting arrangement for the motor.

Motors are fitted with drain holes and closable plugs. The plugs are open on delivery. When mounting the motors, ensure that the drain holes face downwards.

In case of vertical mounting, the upper plug must be hammered home completely. In very dusty environments, both plugs should be hammered home.

When mounting differs from foot-mounted IM B3 arrangement, use variant code 066 when ordering. (See variant code 065 under Drain holes and variant code 066 under Mounting arrangements in the Variant codes section.)

Heating elements

Heating elements are installed into windings to keep them free of corrosion in humid conditions. The required power of heating elements is shown in the table. You can order heating elements with variant code 450 or 451.

Motor size	132	160	180	200	225	250	280	315
Heating element power (W)	25	25	50	50	50	50	60	2x60

Bearings

Synchronous reluctance motors are normally fitted with single-row deep-groove ball bearings, as shown in the table below.

If the bearing at the D-end is replaced with a roller bearing (NU- or NJ-), higher radial forces can be handled. Roller bearings are suitable for belt-drive applications.

When there are high axial forces, angular-contact ball bearings should be used. This option is available on request. When ordering a motor with an angular-contact ball bearing, specify also the method of mounting and the direction and magnitude of axial force. See Variant codes for special bearings.

Standard motor with deep-groove ball bearings

315	1000 - 1500	NU 319/C3

Axially locked bearings

All motors are equipped as standard with an axially locked bearing at the D-end.

Transport locking

Motors with roller bearings or an angular-contact ball bearing are fitted with a transport lock before dispatch to prevent damage to bearings during transport. A warning sign is attached to motors larger than 250 when transport locking is used.

Locking may also be fitted in other cases if severe transport conditions are expected.

Bearing seals

These tables present the standard and alternative sizes and types of seals per motor size.

Standard designs

Motor size	n _N r/min	Standard design Axial seal

Bearing life and lubrication

Bearing life

The nominal life L_{10h} of a bearing is defined according to ISO 281 as the number of operating hours achieved or exceeded by 90 % of identical bearings in a large test series under specified conditions. 50 % of bearings achieve at least five times this lifetime.

The calculated bearing life L_{10h} for power transmission by means of coupling is for horizontally mounted motors in sizes 280 to 315 $\geq 200,000$ hours.

Lubrication

On delivery, motors in frame size 225 and above are pre-lubricated with high-quality grease. Before first start-up, see instructions for relubrication and recommended grease in the Manual for low voltage motors delivered together with the motor, or see the lubrication plate on the motor.

Lubrication intervals

ABB follows the L_1 principle in defining lubrication intervals. According to this principle, 99 % of motors will make the interval time. The synchronous reluctance motor sizes 250 to 315 have regreasable bearings as the standard solution. The lubrication intervals can also be calculated according to the L_{10} principle, which usually gives twice as long interval times. L_{10} values are available from ABB at request.

Motors with relubrication nipples

In frame sizes 280 – 315, the bearing system allows the use of a valve disc to ease lubrication. Motors are lubricated while running.

The grease outlet opening has closing valves at both ends. These should be opened before greasing and closed 1 – 2 hours after regreasing. This ensures that the construction is tight and bearings remain dust- and dirt-free. A grease-collection method can be used optionally.

The following tables show lubrication intervals according to the L_1 principle for various nominal speeds in 25 °C ambient temperature. These values apply to horizontally mounted motors (B3) with 80 °C bearing temperature and high-quality grease containing lithium-complex soap and mineral or PAO-oil.

Frame size	Amount of grease, g/bearing	Interval h at		
		3000 r/min	1500 r/min	1000 r/min
Ball bearings				
132 - 200	greased for life			
225	50	6500	-	-
250	60	-	11 500	15 000
280	40	-	9600	14 000
315	55	-	7600	11 800

Lubrication intervals in duty hours for ball bearings

Frame size	Amount of grease, g/bearing	Interval h at		
		3000 r/min	1500 r/min	1000 r/min
Roller bearings				
132	On request	-	-	-

200	40	4000	8500	11 500
225	50	3000	-	-
250	60	-	5500	7500
280	40	-	5250	7000
315	55	-	3800	5900

Lubrication intervals in duty hours for roller bearings

Grease lifetime

Grease lifetime information is relevant for motors equipped with bearings greased for life, which means standard synchronous reluctance motors in frame sizes 160 – 200.

The standard bearing grease is high-quality grease intended for normal temperatures in dry or humid environments. The normal ambient temperature is 40 °C, in some cases even higher. Refer to the table below to see how temperature affects grease lifetime.

As an optional solution, grease nipples for regreasing can also be provided. See variant code 041.

The grease lifetime L_{10} , applicable to permanently lubricated bearings, is defined as the number of operating hours after which 90 % of bearings are still adequately lubricated. 50 % of the bearings achieve twice the lifetime L_{10} .

40 000 hours should be regarded as the definitive maximum lifetime after which bearings should be replaced. Lifetime is subject to the load conditions of the application run by the motor.

Motor size	Speed r/min	Ambient temperature and grease lifetime					
		25 °C	40 °C	50 °C	60 °C	70 °C	80 °C
132	3000	40 000	31 000	20 000	12 000	6 000	3 000
132	1500	40 000	40 000	40 000	24 000	13 000	7 000
160	3000	40 000	40 000	40 000	26 000	14 000	8 000
160	1000 - 1500	40 000	40 000	40 000	40 000	40 000	37 000
180	3000	38 000	38 000	38 000	38 000	23 000	13 000
180	1500	40 000	40 000	40 000	32 000	28 000	15 000
200	3000	27 000	27 000	27 000	24 000	14 000	8 000
200	1000 - 1500	40 000	40 000	40 000	40 000	40 000	30 000

Grease lifetime L_{10} in deep groove ball bearings of type 2Z, horizontally mounted motors in continuous duty

Radial forces

Permissible loading on the shaft

The following table shows permissible radial forces on the shaft in Newtons, assuming zero axial force, a 25 °C ambient temperature, and normal conditions. The values are given for a calculated bearing life of 20 000 and 40 000 hours per motor size.

These calculated values further assume mounting position IM B3 (foot-mounted), with force directed sideways. In some cases, the strength of the shaft affects permissible forces.

Permissible loads of simultaneous radial and axial forces can be supplied on request.

If the radial force is applied between points X0 and Xmax, the permissible force FR can be calculated with the following formula:

$$F_R = F_{X_0} - \frac{X}{E} (F_{X_0} - F_{X_{\max}})$$

E = length of the shaft extension in the standard version.

Permissible radial forces, motor sizes 132 – 315

Motor size	Speed r/min	Length of shaft extension E (mm)	Ball bearings				Roller bearings			
			20 000 hours		40 000 hours		20 000 hours		40 000 hours	
			F_{X_0} (N)	$F_{X_{\max}}$ (N)	F_{X_0} (N)	$F_{X_{\max}}$ (N)	F_{X_0} (N)	$F_{X_{\max}}$ (N)	F_{X_0} (N)	$F_{X_{\max}}$ (N)

¹⁾ The maximum lifetime of the grease is 38 000 h, see Grease lifetime

²⁾ The maximum lifetime of the grease is 27 000 h, see Grease lifetime

Axial forces

The following tables present permissible axial forces on the shaft in Newton's, assuming zero radial force, a 25 °C ambient temperature, and normal conditions. The values are given for a calculated bearing life of 20 000 and 40 000 hours per motor size.

Permissible loads of simultaneous radial and axial forces can be supplied on request. For axial force F_{AD} , it is assumed that the D-bearing is locked with a locking ring.

¹⁾ The maximum lifetime of the grease is 38 000 h, see Grease lifetime.

²⁾ The maximum lifetime of the grease is 27 000 h, see Grease lifetime.

Terminal box

Standard terminal box

Degree of protection and mounting options

The degree of protection for the standard terminal box is IP55. By default, terminal boxes are mounted on top of the motor at D-end and can be turned 4*90°. The terminal box can also be mounted on the left or right side of the motor (see Mounting arrangements).

Cable entries

Motor sizes 160 to 250 come with connection flanges with tapped cable entries and can be provided with cable glands as an option. In sizes 280 to 315 SM and 315 ML the standard terminal box has a flange with cable glands, and 315 LK has cable sealing end units. The standard flange material is siluminum. See the table below for details on standard terminal boxes.

Cable type and terminations

If no cable type is specified in the order, it will be a PVC-insulated non-armored cable, and its termination parts are determined as shown in the table below.

Terminations are suitable for copper and aluminum cables (Al-cables on request for motor sizes 160 to 250). Cables are connected to terminals by cable lugs, which are not included in the delivery.

Ordering

To ensure the delivery of desired terminations for the motor, state the cable type, quantity, size and outer diameter when ordering. Non-standard designs of terminal boxes, such as non-standard size, or higher degree of protection, are available as options.

See Variant codes for all options available.

Standard terminal box connections

Motor size	Speed r/min	Terminal box type	Size of flange opening	Type of through holes	Size of through holes	Cable outer diameter mm	Max. connectable core cross-section mm ² /phase	Number and size of terminal bolts	Method of connection

Terminal box

Terminal box alternatives

Optional adapters

There is a broad selection of cable termination accessories for the termination of one or several cables. The most common ones are presented below.

Main terminal box

Adapters

Flange with glands; cable sealing end units

How to order

- Check first that the terminal box itself allows mounting of the desired cable and cable cores (see previous page).
- If very large cables are used, it may be necessary to use a larger terminal box than standard. Select the right cable gland(s) or cable sealing end unit(s) that match the outer diameter of the cable(s)
- Select the appropriate adapter or flange.
- Note that turning the terminal box to a non-standard position may limit the use of some adapters.

Ordering example for special cable entry and auxiliary terminal box

Motor	250 kW, 1500 rpm, 400 V 50 Hz
Cables	2 pieces, outer diameter 58 mm, single core cross section 185 mm² clamping device needed, cables coming from below
Needed one terminal box for anticondensation heaters and another for temperature detectors, material must be cast iron.	
Motor	M3BL 315 MLA, 1500 rpm, B3
Adapter	D-D - variant code 293
Cable sealing end unit	Variant code 278
Clamping	Variant code 231
Auxiliaries	Variant codes 380, 567, 568

Main terminal box and maximum single core cross-section

The terminal boxes are named according to their current-carrying capacity, from 160 to 1200. You can select one size larger than standard terminal box if a larger single cross-section is needed. The standard sizes of the main terminal box are listed in the following table. Check also the capacity of the cable entry to make sure that the cables fit. A larger terminal box can be ordered with variant code 019.

Standard terminal box	Size of opening	Max. single cross-section, mm²/phase
160	B	1×70
210	C	2×240
370	D	2×300
750	E	4×500
1200	E	4×500

Optional adapters

To allow easy termination of cables entering the terminal box from above or below, an angle adapter is recommended. These are available for motor sizes 280 - 315 and can also be used to allow the mounting of several cable sealing end units or gland plates.

   				
Adapter				
Variant code	292	293	294	295
Suited for motor sizes	280	315 SM, ML	315 LKA, LKC	315 LKA, LKC
Opening to terminal box	C	D	E	E
Flange or opening for end unit	C	D	D	2×D
Material	Steel	Steel	Steel	Steel
Notes			Included in type 750 terminal box when 750 is the standard size.	Only possible on type 1200 terminal box.

Cable sealing end units

As an alternative to flanges and cable glands, cable sealing end units can be used. These allow more space for spreading the cores for easy termination. Cable sealing end units have rubber-sealed entries for one of the two main cables. In addition, there are two plugged M20 holes for auxiliary cables.

  			
End unit			
Variant code	277	278	279
Suited for motor sizes	280	315 SM, ML	315 SM, ML
Opening to terminal box	C	D	D
Cable outer diameter	1 - 2 cables, 48 - 60 mm	1 - 2 cables, 48 - 60 mm	1 - 2 cables, 60 - 80 mm
Cable entry for auxiliary cable	2×M20 plugged holes	2×M20 plugged holes	2×M20 plugged holes
Additional optional variants	EMC cable gland (704); Standard gland with clamping device (231)	EMC cable gland (704); Standard gland with clamping device (231)	EMC cable gland (704); Standard gland with clamping device (231)

Auxiliary terminal box

You can equip motors from frame size 160 upward with one or several auxiliary terminal boxes for connection of auxiliaries like heaters or temperature detectors. The standard auxiliary terminal box material for motor sizes 280 - 315 is aluminum and for 160 - 250 cast iron. For frame sizes 280 - 315, cast iron as box material is also available as an option.

Connection terminals are of a spring-loaded type for quick and easy connection. These are suitable for up to 2.5 mm² wires. Auxiliary terminal boxes for frame sizes 280 – 315 are equipped with an earthing terminal. The first auxiliary terminal box is located on the right-hand side at D-end as standard. The standard cable entry size is M20 for both aluminum and cast iron, and the number of entries depends on the terminal box type and the number of selected auxiliaries.

Related variant codes	
380	Separate terminal box for temperature detectors, standard material
418	Separate terminal box for auxiliaries, standard material
567	Separate terminal box material: cast iron
568	Separate terminal box for heating elements, standard material
569	Separate terminal box for brake

Small auxiliary aluminum terminal box for motor sizes 280 - 315 (variant codes 418, 568, 380, 569)

The size of terminal box ordered with these codes depends on the number of accessories ordered. 80 x 125 mm, max 12 strips. Earthing size M4.

Large auxiliary aluminum terminal box for motor sizes 280 - 315.

The size of terminal box ordered with these codes depends on the number of accessories ordered. 80 x 250 mm, max 30 strips. Earthing size M4.

Auxiliary cast iron terminal box

Frame size for motor sizes 160 - 250 (variant code 418): 119 x 170 mm, max. 18 strips. No earthing.

Frame size for motor sizes 280 - 315 (variant code 567): 211 x 188 mm, max 30 strips. Earthing size M6.

Terminal box

Dimensions

The terminal box dimensions presented on this page apply to cast-iron motors in sizes 160 – 315. For dimensions of integrated terminal boxes in aluminum motors, size 132, see the following Dimension drawings pages.

Axial fan, N-end

Fan motors with an axial fan are available for motor sizes 160 – 315 and can be ordered with variant code 183. The values here are given for 400 V, but technical data for other voltages can be found in MotSize.

Axial fan, N-end (motor sizes 160 - 315)

Main motor	Fan motor type (at 50 Hz)	Voltage V at 50 Hz	Power kW	Current A
M3BL 160 - 250	M2VA 63 B 4 B14	400	0.18	0.61
M3BL 280 - 315 ML	M3BP 80 MD 4 B14	400	0.75	1.83
M3BL 315 LK	M3BP 90 SLD 4 B14	400	1.5	3.0

Fan on top, N-end

The non-axial fan available for motor sizes 280 – 315 is a Ziehl-Abegg fan with an integrated motor. This cooling option is suited for 400 V, 50 Hz networks and can be ordered with variant code 422.

Fan on top

Main motor	Fan motor type	Voltage V	Freq. Hz	Power kW	Current
M3BL 280	Ziehl-Abegg RH35	400 VY	50	0.35	0.83
		460 VY	60	0.5	0.9
M3BL 315	Ziehl-Abegg RH40	400 VY	50	0.50	1.0
		460 VY	60	0.8	1.4

Special motor and fan on top, N-end

A special ABB fan motor type is available for motor sizes 280 – 315. It is suited for environments where IP 65 is the required IP class or where the input voltage must be other than 360 – 420 V (50 Hz).

The values here are given for 400 V, but technical data for other voltages can be found in MotSize.

The centrifugal impeller used in the fan is a Ziehl-Abegg impeller. This type of cooling can be ordered with variant code 514.

Special motor and fan on top

Main motor	Fan motor type	Voltage V at 50 Hz	Power kW	Current A
M3BL 280 - 315	M3BP 80 MD 4 B34	400	0.75	1.83

Accessories

Protective roof and tachometer

M000057

Protective roof, variant code 005

M000058

Tachometer, variant codes 472, 473, 572, and 573

M000059

Separate cooling without tachometer: 183 and 189
With tachometer: 474, 476, 477, 574, 576, and 577

Accessories

Silencer for motor sizes 280 - 315

Both foot-mounted and flange-mounted motors can be fitted with a silencer to reduce noise level by about 5 – 6 dB(A). The silencer is painted blue and made of 2 mm steel sheet. The sound absorbing material is 40 mm thick polyurethane foam. On the rim there is a rubber strip for sealing on the floor. The silencer fits loosely over the motor.

The variant code for ordering a silencer is 055.

Motor size	AV	LV	LVT	DV	O ¹⁾	S ²⁾	Weight kg
280 SM_	681	1010	1090	616	50	762	38
315 SM_	760	1094	1191	697	60	852	47
315 ML_	760	1205	1302	697	60	852	51
315 LK_	760	1411	1508	697	60	852	58

¹⁾ Clearance for motor cooling
²⁾ Clearance for removing the silencer

Note: The dimensions are only valid for standard foot-mounted motors.

Accessories

Slide rails for motor sizes 160 - 250

A set of slide rails includes two complete rails with screws for mounting the motor on the rails. Screws for mounting the rails on the foundation are not included. Slide rails have unmachined lower surfaces and should, before tightening down, be supported in a suitable manner.

Slide rails can be ordered with article numbers shown in the table.

Motor size	Type	Article no. 3GZV103001-	A	B	C	D	E	F	G	H	L	M	N	O	Xmax	Ymax	Weight/ rail kg
160-180	TT180/12	-14	75	42	700	630	57	17	26	M12	120	M12	50	-	520	580	12.0

* Insulated bearing at N-end as standard

** For detailed information on connections, see Terminal box alternatives section.

*** Terminals for connection with cable lugs (lugs not included in the delivery).

For your notes

Total product offering

Motors, generators and mechanical power transmission products with a complete portfolio of services

ABB is the leading manufacturer of low, medium and high voltage motors and generators, and mechanical power transmission products. ABB products are backed by a complete portfolio of services. Our in-depth knowledge of virtually every type of industrial process ensures we always specify the best solution for your needs.

> Low and high voltage IEC induction motors

- Process performance motors
- General performance motors
- High voltage cast iron motors
- Induction modular motors
- Slip-ring modular motors
- Synchronous reluctance motors

> Low and medium voltage NEMA motors

- Steel frame open drip proof (ODP) motors
- Weather protected, water cooled, fan ventilated
- Cast iron frame (TEFC)
- Air to air cooled (TEAAC) motors

> Motors and generators for explosive atmospheres

- IEC and NEMA motors and generators, for all protection types

> Synchronous motors

> Synchronous generators

- Synchronous generators for diesel and gas engines
- Synchronous generators for steam and gas turbines

> Wind power generators

> Generators for small hydro

> Other motors and generators

- Brake motors
- DC motors and generators
- Gear motors
- Marine motors and generators
- Single phase motors
- Motors for high ambient temperatures
- Permanent magnet motors and generators
- High speed motors
- Smoke extraction motors

- Wash down motors
- Water cooled motors
- Generator sets
- Roller table motors
- Low inertia motors
- Traction motors and generators

> Life cycle services

Life cycle services and support

From pre-purchase to migration and upgrades

ABB offers a complete portfolio of services to ensure trouble-free operation and long product lifetimes. These services cover the entire life cycle. Local support is provided through a global network of ABB service centers and certified partners.

Pre-purchase

ABB's front-end sales organization can help customers to quickly and efficiently select, configure and optimize the right motor or generator for their application.

Installation and commissioning

Professional installation and commissioning by ABB's certified engineers represent an investment in availability and reliability over the entire life cycle.

Engineering and consulting

ABB's experts provide energy efficiency and reliability appraisals, advanced condition and performance assessments and technical studies.

Condition monitoring and diagnosis

Unique services collect and analyze data to provide early warnings of problems before failures can occur. All critical areas of the equipment are covered.

Maintenance and field services

ABB offers life cycle management plans and preventive maintenance products. The recommended four-level maintenance program covers the entire product lifetime.

Spare parts

Spare parts and support are offered throughout the life cycle of ABB products. In addition to individual spares, tailored spare part packages are also available.

Repair and refurbishment

Support for all ABB motors and generators and other brands is provided by ABB's global service organization. Specialist teams can also deliver emergency support.

Migration and upgrades

Life cycle audits determine the optimum upgrades and migration paths. Upgrades range from individual components to direct replacement motors and generators.

Training

Product and service training courses take a practical approach. The training ranges from standard courses to specially tailored programs to suit customer requirements.

Specialized support

Specialized support is offered through ABB's global service organization. Local units provide major and minor repairs as well as overhauls and reconditioning.

Service contracts

Service contracts are tailored to the customer's needs. The contracts combine ABB's entire service portfolio and 120 years of experience to deploy the optimal service practices.
