# Busch-VoiceControl® KNX

General Information

# Busch-VoiceControl® KNX

## Motivation

### Situation

Voice control is a huge and growing market

Millions of sold devices like Amazon Alexa, Google Assistant and Apple devices based on Siri

Controlling your complete home with your voice is a clear trend

There are three big players on the market for standalone voice control devices:

- Amazon Alexa
- Google Assistant
- Apple Siri

For Apple you have to integrate it in Apple Homekit and then it has to be Apple certified

# Busch-VoiceControl® KNX

## Motivation

### Goals

---

To be the only international company to have a certified solution for all three systems

To re-use the configuration of your Busch-ControlTouch KNX

To control Lights, Blinds, Temperature in your home

To be the Smartest Voice Control Device on the market

To control up to 150 functions

To be integrated in Apple Homekit

To have a complete online configuration

# Busch-VoiceControl® KNX

## Overview

### Features

One device for all 3 systems (Amazon, Google and Apple), usage even in parallel possible

Control of lights, blinds and room temperature

Read out of various status information

Up to 150 functions are possible

Apple certified product

Simple online configuration

# Busch-VoiceControl® KNX

## Overview

### Use Cases

“You come home with 2 bags and no free hands. Use your smart device to turn on the lights”

“You wake up in the morning, without getting up or searching for a push button shutter/blinds can be opened or light can be switched or dimmed”

“Control your lights/blinds/temperature without leaving your couch”

“AAL - Ambient Assisted Living: For people who have physical disability”

“Define routines for coming home and leaving”

“Architectural rooms, where you don't want to see any switches”

**And:**

**Apple HomeKit Device – Bridge from KNX to other HomeKit devices**

# Busch-VoiceControl® KNX

## Overview

### Technical Data

Article Code: **VCO/S 99.11**

Connection voltage

- Auxiliary voltage: 5 - 36 VDC
- Power adaptor connector 5 VDC

Power consumption: 250 mA (at 5 VDC)

Additional connections: KNX

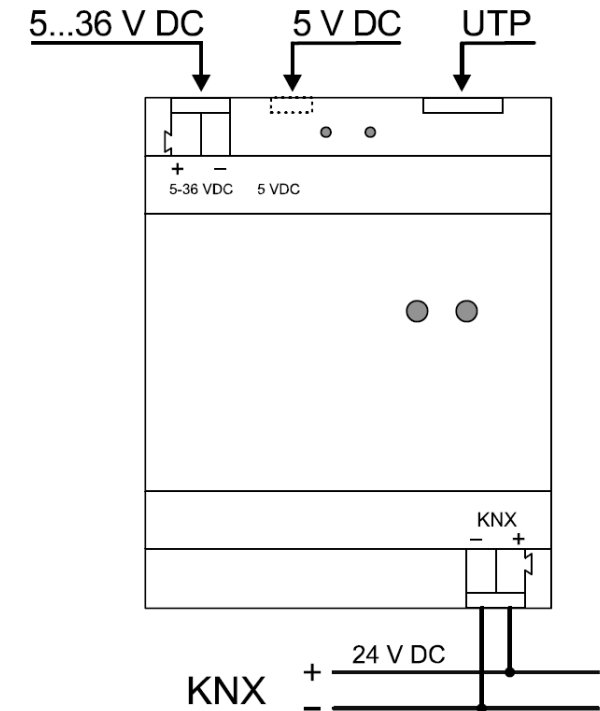

Ethernet: 10 / 100 Mbit

Protection type: IP20

Ambient temperature: 0°C to +70°C

Storage temperature: -40°C to +85°C

Dimensions (LxWxH): 70 x 90 x 60 mm

# Busch-VoiceControl® KNX

## Overview

### Operation and Troubleshooting

#### A – left button:

Keep pressed during booting → Return to factory settings

Press briefly → Complete reboot

Press long (> 3 seconds) → Return to factory settings

#### A – right button:

Press briefly → Reset of the application

#### B – left LED:

Green: Flashes slowly → Booting or shutting down

Green: Lit constantly → Application is ready to start

#### B – right LED:

Green: Flashes slowly → Normal procedure - OK

Yellow: Flashes slowly → No KNX connection

Red: Flashes fast → LAN problem, no network

Red / green: Flashes at intervals → No Internet connection, only LAN

# Busch-VoiceControl® KNX

Features

## How to talk to my smart device? – Part 1

### Phrases

	HomeKit, start with: "Hey Siri, .."	Alexa, start with: "Alexa, .."	Google Home, start with: "OK Google, .."
<b>dimming actuator</b>	Turn on/off [ <i>light name</i> ] Set [ <i>light name</i> ] to 60% Dim [ <i>light name</i> ] down by 20% Increase [ <i>light name</i> ] by 20% What is the current status of [ <i>light name</i> ]? 	Turn on/off [ <i>light name</i> ] Set [ <i>light name</i> ] to 60% 	Turn on/off [ <i>light name</i> ] Set [ <i>light name</i> ] to 60% What lights are on? 
<b>switch actuator</b>	Turn on/off [ <i>light name</i> ] What is the current status of [ <i>light name</i> ]? 	Turn on/off [ <i>light name</i> ] 	Turn on/off [ <i>light name</i> ] What lights are on? 
<b>switch</b>	Turn on/off [ <i>switch name</i> ] What is the current status of [ <i>switch name</i> ]? 	Turn on/off [ <i>switch name</i> ] 	Turn on/off [ <i>switch name</i> ] 
<b>thermostat</b>	Set the thermostat to 20 degrees Lower the thermostat Increase the thermostat What temperature is [ <i>My Home or Room</i> ] set to? 	Set the thermostat to 20 degrees Lower the thermostat Increase the thermostat What is the temperature of thermostat? 	Set the thermostat to 20 degrees What is the temperature in my house? 

# Busch-VoiceControl® KNX

## How to talk to my smart device? – Part 2

### Phrases

	HomeKit, start with: "Hey Siri, .."	Alexa, start with: "Alexa, .."	Google Home, start with: "OK Google, .."
blinds actuator	Open the blinds Close the blinds Set the blinds to 40% What is the current status of the blinds?	Set the blind to 100% Set the blind to 0%	-
temperature	What is the current temperature in my home?	What is the temperature of [room name]?	-
light intensity	What is the current light intensity?	-	-
humidity	What is the current humidity?	-	-
occupancy sensor	What is the status of the occupancy sensor?	-	-
movement sensor	What is the status of the motion sensor?	-	-

# Busch-VoiceControl® KNX

Function: switching light

The function requires a 1-bit group address "Switching" (DPT 1.x) as sending group address and one or several status group addresses of the same type.

The function is supported by Apple, Amazon and Google.

Type	Name	Supported by:			Sending GA	Status GA
		Apple	Amazon	Google		
-	Living room					 
Switching light	Table lamp living room	✓	✓	✓	0/0/13	0/0/13

# Busch-VoiceControl® KNX

Function: dimming light

The function requires a 1-byte group address "Dimming" (DPT 5.001) as sending group address for dimming values from 0% to 100% and a 1-bit address "Switching" (DPT 1.x) as sending group address. Both group addresses require one or several status group addresses of the same type.

The function is supported by Apple, Amazon and Google.

Type	Name	Supported by:			Sending GA	Status GA
		Apple	Amazon	Google		
-	Living room					
Dimming light	Ambience light living room	✓	✓	✓	1/0/5	1/0/5
	Switching				0/0/5	0/0/5

# Busch-VoiceControl® KNX

Function: Temperature sensor [status]

The function requires a 2-byte status group address "Temperature" (DPT 9.001) for the relevant floating point value.  
The function is supported by Apple and Amazon.

Type	Name	Supported by:			Sending GA	Status GA
		Apple	Amazon	Google		
-	Beleuchtung / Schalten					
Temperature sensor [status]	Temp. Sensor	✓	✓			3/7/0

# Busch-VoiceControl® KNX

## Function: Blinds

The function requires either:

- a 1-bit group address "Switching" (DPT 1.x) as a sending one and status group address for up and down movement and
- a 1-bit status group address "Switch" (DPT 1.x) for starting/stopping.

Or:

- a 1-bit status group address "Switching" (DPT 1.x) for up and down movement and
- a 1-bit status group address "Switch" (DPT 1.x) for starting/stopping and
- a 1-byte group address "Scaling" (DPT 5.001) as a sending one and status group address for position values from 0% to 100%.

The function is supported by Apple and Amazon.

Type	Name	Supported by:			Sending GA	Status GA
		Apple	Amazon	Google		
-	Living room					
Blinds	Blind east	✓	✓			3/0/1
	start/stop					3/0/2
	position (%)				3/0/3	3/0/3

# Busch-VoiceControl® KNX

## Function: Thermostat

The function requires the following group addresses:

- a 2-byte status group address "Temperature" (DPT 9.001) is for the actual temperature.
- a 2-byte group address "Temperature" (DPT 9.001) as a sending one for the setpoint.
- Two 1-bit group addresses "Switching" (DPT 1.x) for the current heating and cooling status (cooling/heating on/off).

Option:

- a 1-byte group address "Offset" as sending group address for the offset (setpoint value confirmation) and a 1-byte status group address for the setpoint value request.
- a 2-byte status group address "Humidity" (DPT 9.007) for the current humidity.

The function is supported by Apple, Amazon and Google.

Type	Name	Supported by:			Sending GA	Status GA
		Apple	Amazon	Google		
-	Living room					
Room temperature controller	RTC	✓	✓	✓		
	Current temperature					2/0/0
	Set point temperature				2/0/1	2/0/1
	Heating on/off					2/0/4
	Cooling on/off					2/0/5
	Shift (optional)				2/0/2	2/0/3
	Current humidity (optional)					

# Busch-VoiceControl® KNX

Function: Pushbutton / switch

The function requires a 1-bit group address "Switching" (DPT 1.x) as sending group address and one or several status group addresses of the same type.

The function is supported by Apple, Amazon and Google.

Type	Name	Supported by:			Sending GA	Status GA
		Apple	Amazon	Google		
-	Beleuchtung / Schalten					
Push-button / switch	Test Switch	✓	✓	✓	1/0/9	1/5/9

# Busch-VoiceControl® KNX

Function: Movement detector [status] / Presence detector [status]

Both functions require a 1-bit status group address "Switching" (DPT 1.x) for the movement status.

Both functions are supported by Apple.

Type	Name	Supported by:			Sending GA	Status GA
		Apple	Amazon	Google		
-	Beleuchtung / Schalten					
Occupancy sensor [status]	Presence	✓				6/0/1

# Busch-VoiceControl® KNX

Function: Brightness sensor [status]

The function requires a 2-byte status group address "Lighting intensity" (DPT 9.004) for the relevant floating point value.  
The function is supported by Apple.

Type	Name	Supported by:			Sending GA	Status GA
		Apple	Amazon	Google		
-	Beleuchtung / Schalten					
Brightness sensor [status]	Brightness Livingroom	✓				6/1/2

# Busch-VoiceControl® KNX

Function: Humidity sensor [status]

The function requires a 2-byte status group address "Humidity" (DPT 9.007) for the relevant floating point value.  
The function is supported by Apple.

Type	Name	Supported by:			Sending GA	Status GA
		Apple	Amazon	Google		
-	Beleuchtung / Schalten					
Humidity sensor [status]	Humidity Livingroom	✓			6/1/3

## Limitations

### Limitations

---

#### Possibilities and impossibilities at a glance:

- **The link between the Alexa or Google account and the VoiceControl is 1-to-1**  
→ It is not possible to link accounts from multiple Alexa or Google accounts with 1 VoiceControl
- **The link between HomeKit and the VoiceControl is 1-on-n**  
→ In HomeKit it is also possible to link multiple VoiceControls to one HomeKit account. As you know, you can only connect a VoiceControl one time via HomeKit, but then you can use the HomeKit app to share this link with third parties
- **All home speakers and devices within your account have access to the VoiceControl**  
→ If you have multiple Home speakers in your Alexa or Google account, and / or more mobile devices, you can of course operate the VoiceControl from all those devices within your account. The same applies to HomeKit
- **All protocols can be used simultaneously**  
→ Use of Amazon, Apple HomeKit and Google Homepod at the same time

---

# Busch-VoiceControl® KNX

Commissioning – Live Demonstration

---

# Busch-VoiceControl® KNX

## Commissioning

1. Register your device
2. Create a project
3. Define the functions of the group addresses
4. Initial commissioning of device (direct access)
5. Settings in the device
6. Inviting your customer
7. Coupling of Busch-VoiceControl with voice controls

---

# Busch-VoiceControl® KNX

Commissioning – direct access

# Busch-VoiceControl® KNX

## Initial commissioning of device (direct access)

After all group addresses and functions are created the device can be installed.

Prerequisite:

- The KNX voice control gateway must be connected to the house network (LAN) with the UTP cable.
- The device must be installed correctly and registered via MyBuildings Portal.
- An Internet connection must be available.

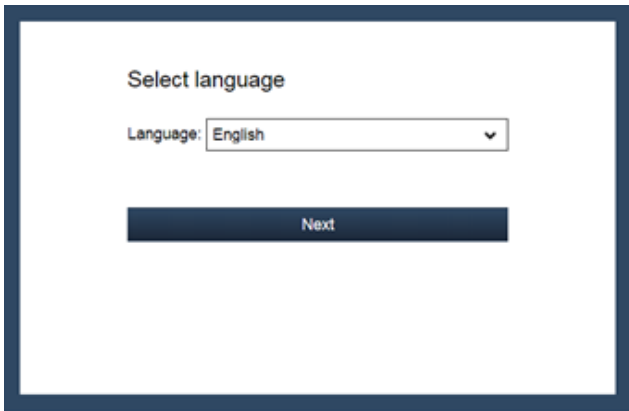

### 1. Find the device with the program “IP Finder”

# Busch-VoiceControl® KNX

## Initial commissioning of device (direct access)

### 2. Select the language

Select language

Language: English ▼

Next

### 3. Enter the details for the local location.

Standorteinstellungen

Damit Uhrzeit, Sonnenaufgang und -untergang richtig angezeigt und berechnet werden können, müssen die folgenden Einstellungen korrekt festgelegt werden:

Zeitzone: UTC +1:00 ▼

Europäische Sommerzeit: ☒ Automatisch

Standort: Germany ▼ Lüdenscheid ▼

Breitengrad: 52.22

Längengrad: 4.53

Weiter

### 4. Enter the user name and PW

VoiceControl-Gerät autorisieren

Geben Sie den Nutzernamen und das Kennwort für das VoiceControl-App-Konto zur Autorisierung des Geräts ein.

Wenn Sie den VoiceControl noch nicht registriert haben, erstellen Sie bitte dieses Konto auf:

<https://voicecontrol.mybuildings.abb.com/register>

Seriennummer: 15187-62060-51224

## Initial commissioning of device (direct access)

### 5. Check network settings

#### Netzwerkeinstellungen

Überprüfen Sie die unten stehenden Netzwerkeinstellungen.  
Möglicherweise ist eine statische IP-Adresse erforderlich, um zu verhindern, dass der VoiceControl nach einem Neustart eine andere IP-Adresse erhält.

DHCP: ☒ aktiviert ☐ deaktiviert

IPv4 ☐ IPv6 ☐

IP-Adresse:

Netzmaske:

Gateway:

IPv4 / IPv6

DNS:

DNS (2):

DNS (3):

DNS (4):

MAC-Adresse: c0.d3.91.90.0f.8d

Weiter

### 6. Configuration is synchronized

#### Load configuration

Synchronizing configuration in progress

Synchronizing configuration 60 % done, please wait . . .

Next

### 7. Finished!

#### Ready

The settings have been saved.  
To use Amazon and / or Google, these must be activated on the Protocol page.

Close

# Busch-VoiceControl® KNX

## Settings in the device (direct access)

In the device you can find different settings.

### Status:

Here you can find general information about the device (firmware, IP address, ...).

You can also check your connection and recheck, if all configured functions have been load into the device.

#### General

Version:	1.0.1
Serialnumber:	15187-62060-51224
Date / time:	2018-09-11 12:22:27

#### Network settings

IP address:	192.168.0.96
Netmask:	255.255.255.0
Gateway:	192.168.0.1

## Coupling of Busch-VoiceControl® KNX with voice controls

### Coupling with Apple HomeKit

1. Install and open the Apple Home-App on a tablet or smartphone.
2. Open the Home-App.
3. Select "Add device".
4. Scan the eight-digit HomeKit code of the device with the camera of the iOS device.
  - The code is located on the interior side of the lid of the device carton.
  - The code is also on the side of the device.
  - The code can also be entered manually.
  - The connection is established after the entry of the code.
5. Add the available components and functions of the KNX voice control gateway in the Home-App.
  - Added switching contacts and dimmers briefly switch on and off and in this way signal that they are activated.
  - New components that have been added later are automatically recognized by the Home-App and added directly.

# Busch-VoiceControl® KNX

# Busch-VoiceControl® KNX

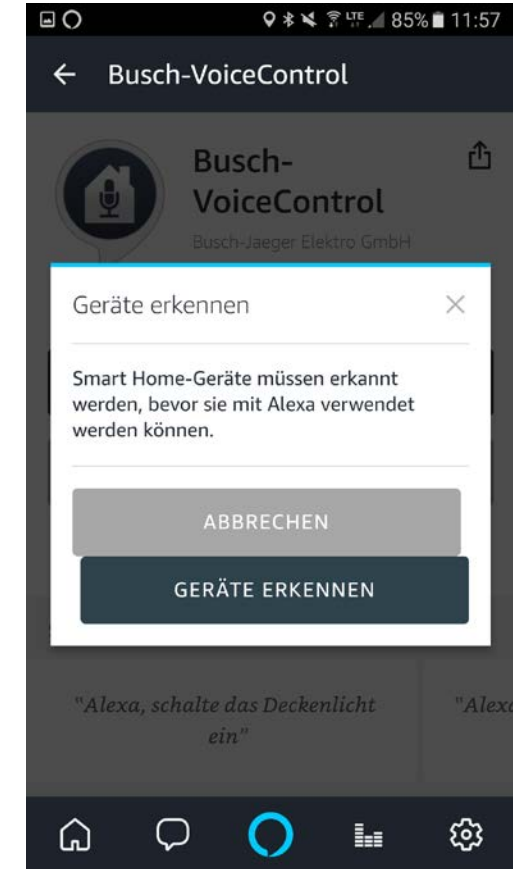

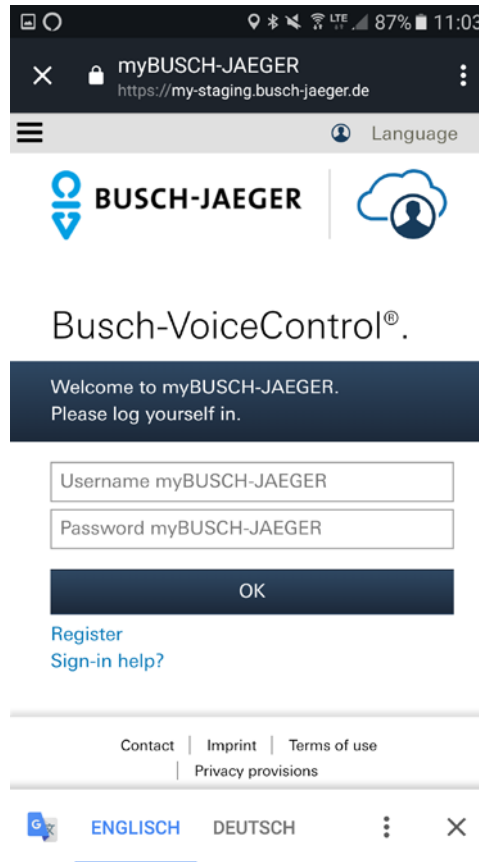

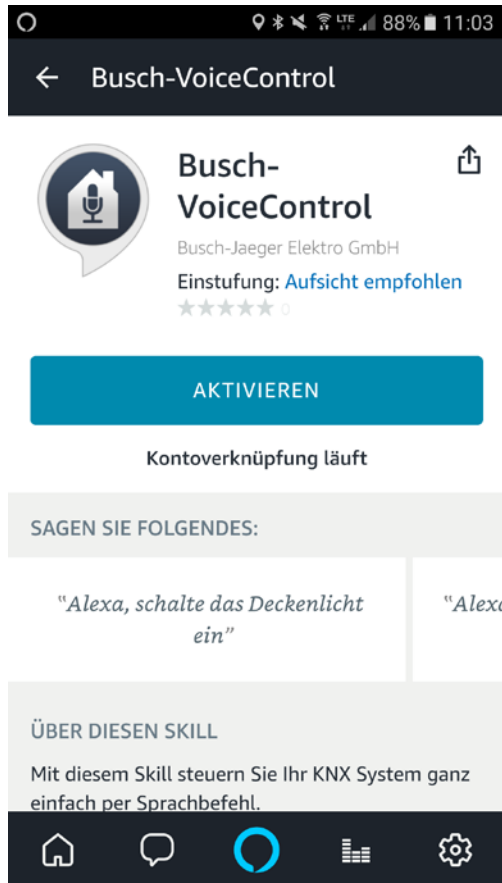

## Coupling of Busch-VoiceControl® KNX with voice controls

### Coupling with Amazon Alexa

1. Install and open the Alexa app on a tablet or smartphone.
2. Open Alexa.
3. Tap on the menu icon and then select "Skills".
4. Add the KNX voice control gateway via the Smart-Home control as "Smart Home Skill".  
→The login window of MyBuildings Portal opens.
5. Enter the user name and the password for the end customer access in the login window.
6. Select the KNX voice control gateway that is automatically recognized in the user account.
  - The connection is established and all components and functions that are made available by the KNX voice control gateway, can be controlled via Alexa.
  - All available components are listed in the Alexa app under "Smart Home devices".
  - New components that are added later can be made available for Alexa in the Alexa app in area "Smart-Home" via function "Add device".

## Coupling of Busch-VoiceControl® KNX with voice controls

### Coupling with Google Home

1. Install and open the "Google Home" app on a tablet or smartphone.
2. Open Google Home.
3. Open the "Devices" menu. To do this, tap on the following icon at the top right:
4. Tap on the three points at the top right on the card of the Google Home device.

5. Select "Settings".
6. Select item "Smart-Home control" in the menu.

---

# Busch-VoiceControl® KNX

## Coupling of Busch-VoiceControl® KNX with voice controls

### Coupling with Google Home

7. Add the KNX voice control gateway via "Devices" and the plus icon.

→ The login window of MyBuildings Portal opens.

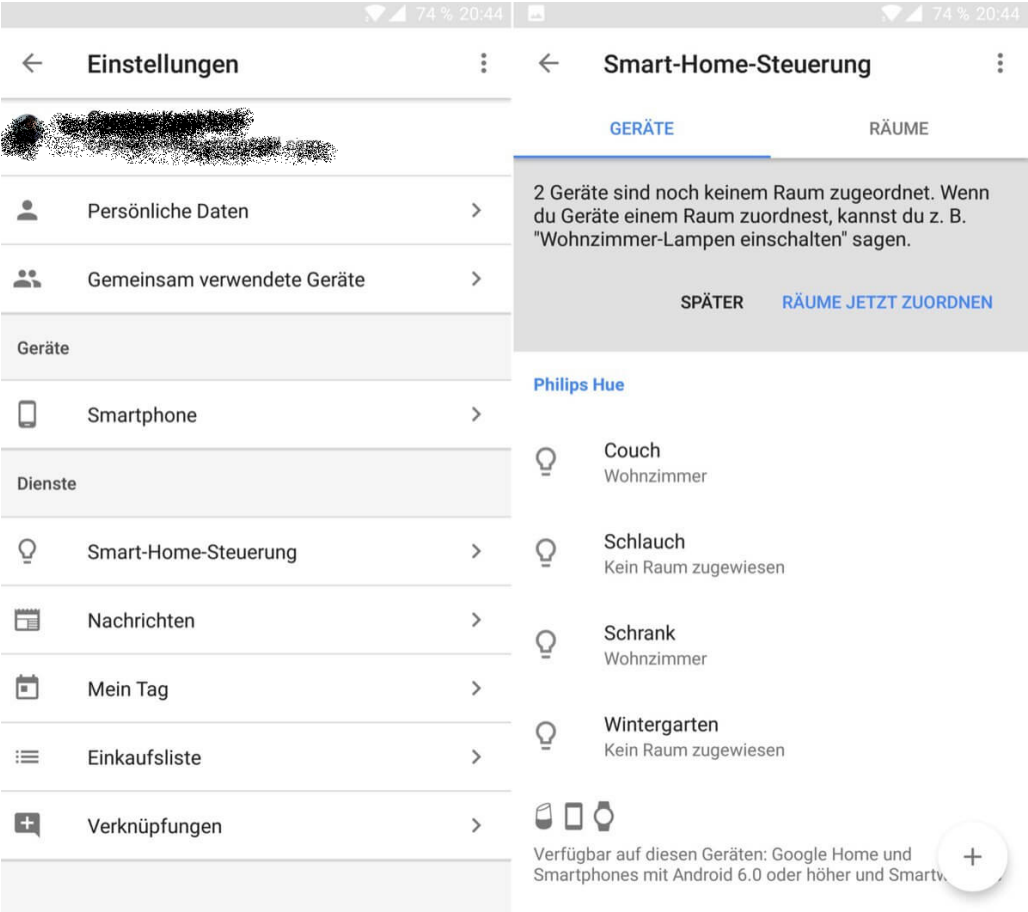

8. Enter the user name and the password for the end customer access in the login window.

9. Select the KNX voice control gateway that is automatically recognized in the user account.

- The connection is established and all components and functions that are made available by the KNX voice control gateway, can be controlled via Google Home.
- All available components are listed in the Google Home app under "Smart Home devices".
- New components that have been added later are automatically recognized by the Google Home app and added directly.
