

# Navigator 600

## Silica and phosphate analyzers

Profibus supplement

**Measurement made easy**

—  
Cost-effective automated  
monitoring of silica or  
phosphate for a wide  
range of applications

## Overview

The Navigator 600 series are advanced colorimetric silica and phosphate analyzers available in single- or multi-stream versions.

This supplementary user guide contains information specific to Profibus® DP-enabled Navigator 600 series analyzers and must be read in conjunction with the user guide relevant to each model.

This supplementary manual applies to Navigator 600 model numbers AW641/xxxxx9xx and AW642/xxxxx9xx.

## For more information

Further publications for the Navigator 600 series analyzers are available for free download from:

[www.abb.com/analytical](http://www.abb.com/analytical)

(see links and reference numbers below) or by scanning these codes:

## Electrical safety

One or more of the following symbols may appear on the equipment labelling:

**Warning** – Refer to the manual for instructions

**Caution** – Risk of electric shock

Protective earth (ground) terminal

Earth (ground) terminal

Direct current supply only

Alternating current supply only

Both direct and alternating current supply

The equipment is protected through double insulation

Information in this manual is intended only to assist our customers in the efficient operation of our equipment. Use of this manual for any other purpose is specifically prohibited and its contents are not to be reproduced in full or part without prior approval of the Technical Publications Department.

## Health and safety

To ensure that our products are safe and without risk to health, the following points must be noted:

- The relevant sections of these instructions must be read carefully before proceeding.
- Warning labels on containers and packages must be observed.
- Installation, operation, maintenance and servicing must only be carried out by suitably trained personnel and in accordance with the information given.
- Normal safety precautions must be taken to avoid the possibility of an accident occurring when operating in conditions of high pressure and/or temperature.
- Chemicals must be stored away from heat, protected from temperature extremes and powders kept dry. Normal safe handling procedures must be used.
- When disposing of chemicals ensure that no two chemicals are mixed.

Safety advice concerning the use of the equipment described in this manual or any relevant hazard data sheets (where applicable) may be obtained from the Company address on the back cover, together with servicing and spares information.

# 1 Introduction

**Note.** This Supplementary User Guide contains information specific to Profibus DP-enabled Navigator 600 Series analyzers and must be read in conjunction with the User Guide relevant to each model.

## 1.1 Profibus

Profibus is a manufacturer-independent, open fieldbus standard for a wide range of applications in manufacturing, process and building automation. Manufacturer independence and openness are ensured by the international standard EN 50170.

Using the Profibus protocol, devices from different manufacturers exchange information on the same communications bus without the need for special interface equipment.

The Profibus family comprises three types of protocol, Profibus DP, Profibus FMS and Profibus PA, each of which is used for different tasks. Of these three protocols, the most important for process automation are Profibus DP and Profibus PA.

Further information on Profibus can be found at [www.profibus.com](http://www.profibus.com).

### 1.1.1 Profibus DP

Profibus DP is designed for high-speed data exchange and is commonly used by complex or externally-powered devices. The central controller or 'master' device (e.g. PLC or PC) utilizes Profibus DP as a fast serial connection with distributed (slave) field devices such as Profibus-enabled Navigator 600 Series analyzers.

DP-V0 is the basic stage of the Profibus DP communication protocol. DP-V0 provides cyclic data exchange between master and slave devices.

The Navigator 600 Series analyzers also support the DP-V1 extension that enables additional acyclic communication between master and slave devices.

### 1.1.2 Profibus PA

Profibus PA is designed to accommodate process automation field devices that require power via the network with the option to use intrinsic safety for hazardous areas. Typical devices using this protocol include transmitters and positioners.

A DP/PA coupler or link device is used to connect the Profibus PA network to the Profibus DP network.

## 1.2 Profibus and ABB Products

Navigator 600 Series analyzers utilize Profibus DP as this is the protocol optimized for high speed and low connection costs (see [www.abb.com/fieldbus](http://www.abb.com/fieldbus) and follow the Profibus link).

## 1.3 Profibus DP Transmission Technology

The transfer method of Profibus DP is RS485 – a proven technology. A twisted, shielded, two-wire copper cable is used as the transfer medium.

The bus structure enables addition and removal of stations or step-by-step commissioning of the system without affecting other stations. Later expansion has no influence on stations already in operation.

Transmission speeds of between 9.6 kbit/sec and 12 Mbit/sec are available. One uniform transmission speed is selected for all devices on the bus when the system is commissioned.

## 2 Installation

### 2.1 Installation Overview

All devices are connected in a bus structure ('line'). Up to 32 stations (master or slaves) can be linked to create one 'segment'.

Each end of a segment must be terminated by an active bus terminating resistor. Both bus terminators must always be powered to ensure fault-free operation therefore it is strongly recommended that they are connected to a back-up power supply.

Up to three line bus amplifiers (repeaters) can be used to extend the network to a total of four segments, allowing a maximum of 125 devices to be installed in the system.

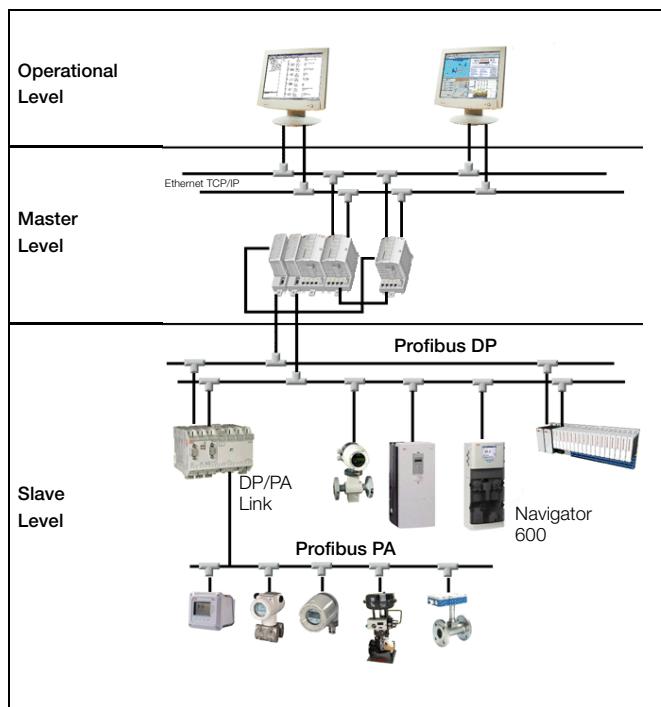

Fig. 2.1 Typical Profibus Network

### 2.2 Cable Length

The maximum cable length of a segment is determined by the transmission speed – see Table 2.1. The cable length specified can be extended by using repeaters but it is recommended that no more than three repeaters are connected in series.

Transmission Rate (bits/sec)	Maximum Segment Length (m)	Maximum Total Network Length (m)
9.6 to 93.75k	1200	4800
187.5k	1000	4000
500k	400	1600
1.5M	200	800
3 to 12M	100	400

Table 2.1 Cable Length

### 2.3 Cable Specification

The cable lengths in Table 2.1 refer to the following cable type:

Characteristic impedance	135 to 165Ω
Capacitance per unit length	<30 pf/m
Loop resistance	110Ω/km
Core diameter	0.64mm
Core cross section	>0.34mm <sup>2</sup>

Suitable Profibus cable, part nos. PCA010, PCA 011 and PCA 012, can be obtained from ABB. Refer to Data Sheet 10/63-6.46 EN.

### 2.4 Device Integration – the GSD File

Profibus devices differ with respect to available functionality and parameters and these vary individually for each device type and manufacturer. In order to obtain 'Plug-and-Play' configuration for Profibus, characteristic device communication features such as manufacturer name, device name, hardware/software versions, baud rate and the number and nature of inputs/outputs are defined in an electronic device data sheet known as a GSD file.

A GSD file is readable ASCII text file that contains both general and device-specific specifications for communication. Each of the entries describes a feature supported by a device. By the means of keywords, a configuration tool reads the device identification, the adjustable parameters, the corresponding data type and the permitted limit values for the configuration of the device from the GSD. Some keywords are mandatory, e.g. Vendor\_Name; others are optional, e.g. Sync\_Mode\_supported.

The GSD file (ABB\_OAD4\_1001.gsd) for Profibus-enabled Navigator 600 Series analyzers conforms to the Profibus standard.

## 3 Network Connection and Configuration

**Warning.** When connecting a Profibus-enabled Navigator 600 Series analyzer to a Profibus-DP network:

- Use shielded data lines and ensure they are not reversed.
- Ensure all data lines are routed clear of the source of any strong electrical and magnetic fields.
- Refer to the User Guide for all other installation and connection details.

### 3.1 Network Connections

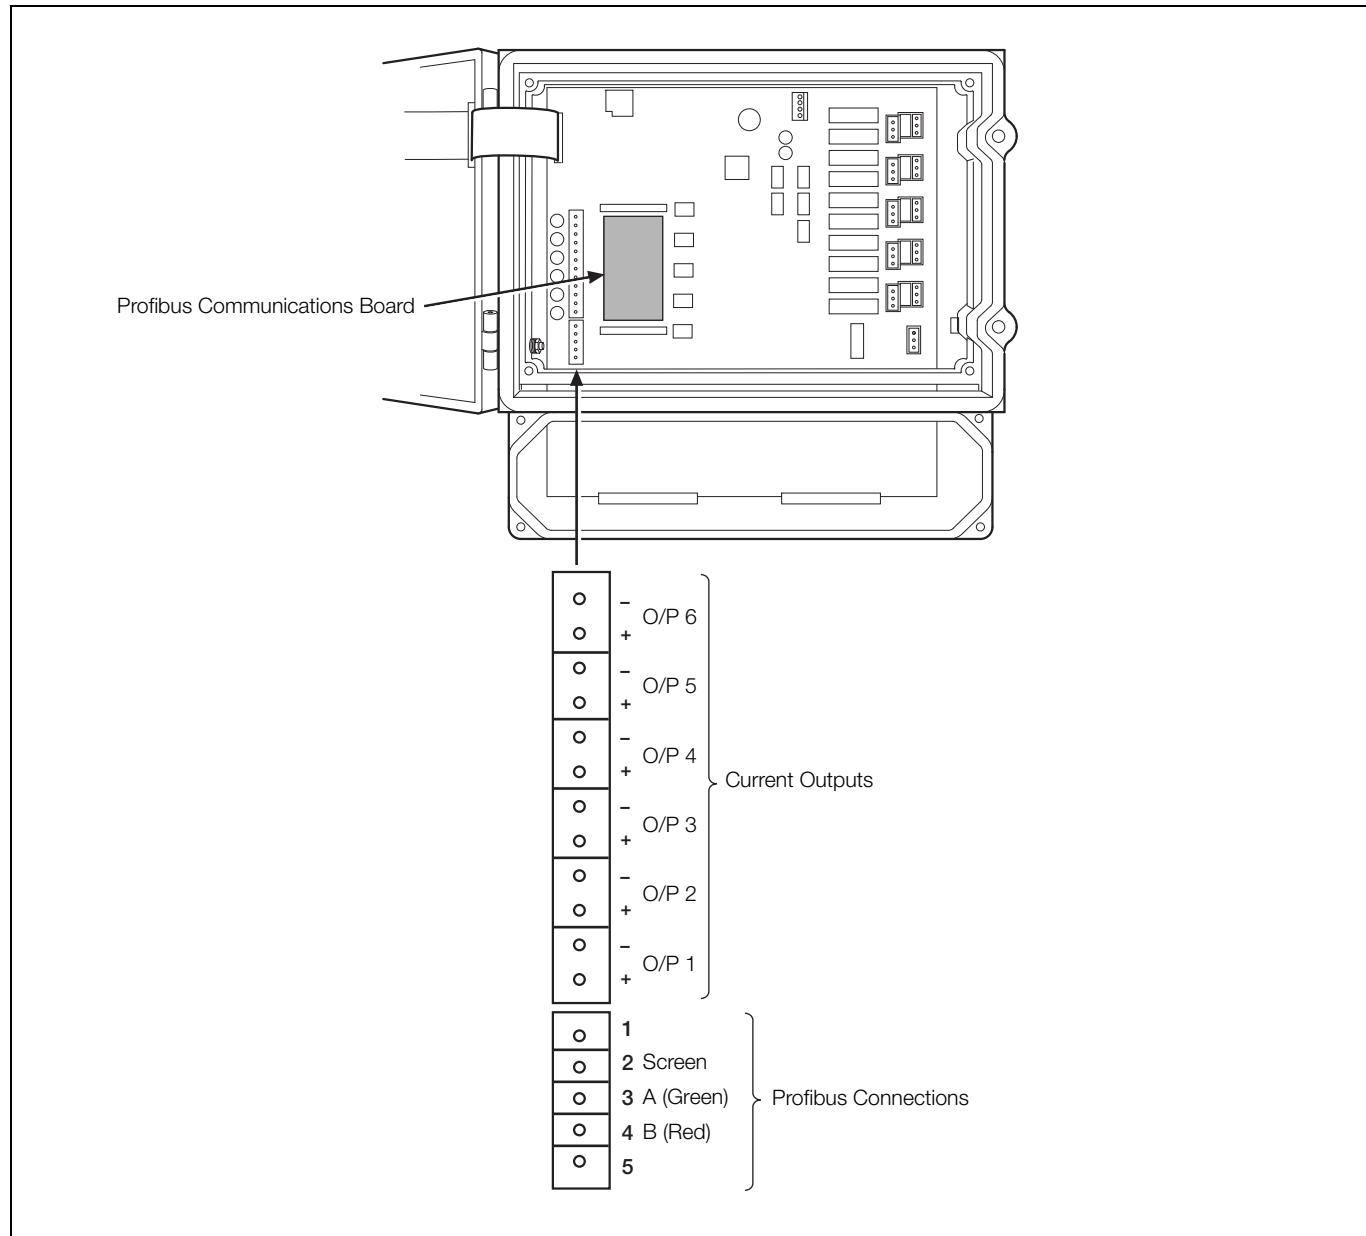

Fig. 3.1 Network Cable Connections

### 3.2 Network Configuration

**Note.** A Navigator 600 Series analyzer is not configured using Profibus commands but via the analyzer's keypad and menu system.

To configure Profibus communications, refer to Section 11.6 of the User Guide relevant to the analyzer model and access the Profibus tab:

Fields	Description
Slave Address	A unique identifying number for the analyzer from 1 to 126. A default address of 6 is set in the factory before shipping. This address can be changed to any value from 1 to 125 to enable the analyzer to be visible on a Profibus system.

## Appendix A – GSD File Module

### Note.

- Float = Floating-point number – requires 4 bytes
- Char = Character – requires 1 byte
- Int = Integer – requires 2 bytes

### A.1 Module 01

Table A.1 defines the Module 01 data available from a Navigator 600 Series analyzer via Profibus cyclic transfer:

Byte	Type	Description
1 to 4	Float	Stream 1 value
5	Char	Stream 1 status
6 to 9	Float	Stream 2 value
10	Char	Stream 2 status
11 to 14	Float	Stream 3 value
15	Char	Stream 3 status
16 to 19	Float	Stream 4 value
20	Char	Stream 4 status
21 to 24	Float	Stream 5 value
25	Char	Stream 5 status
26 to 29	Float	Stream 6 value
30	Char	Stream 6 status

Table A.1 Module 01 Data

### A.2 Status Byte Definition

Table A.2 defines the meaning of the contents of a Navigator 600 Series analyzer's status byte.

Byte (Hex)	Definition
1C	OOS (Out of Service)
80	Good
89	Low alarm limit advisory alarm
8A	High alarm limit advisory alarm
8D	Low-low alarm limit critical alarm
8E	High-high alarm limit critical alarm

Table A.2 Status Byte Definition

**<sup>1</sup>Store Definitions:**

C = Constant – the value held in a Navigator 600 Series analyzer does not change

D = Dynamic – a value or state calculated by a Navigator 600 Series analyzer

N = Non-volatile – typically a configuration parameter that is stored in a Navigator 600 Series analyzer's non-volatile memory

**<sup>2</sup>Access Definitions:**

R – Read only.

R/W – Read/Write.
